

Dulux - made in New Zealand for our unique conditions

Dulux has been involved with the manufacture of paint and related systems in New Zealand for over 60 years and is the largest manufacturer of quality paint products in New Zealand.

Dulux paint is made in New Zealand for our unique conditions and is formulated using only the highest quality materials.

Dulux offers many products that are greener during manufacture, and in their use and disposal. For a start, Dulux is a proud member of the NZ Green Building Council. So, of course, our range of Enviro₂ low-VOC paint meets the VOC compliance criteria outlined in Green Star NZ. Many Dulux products are Environmental Choice accredited and our commitment to a healthier environment doesn't end once the paint's up. The EnviroWash System, available only from Dulux, cleans brushes, rollers and tins, leaving clean water and neutral solid waste.

A recently completed Auckland waterfront development, the Docks Apartments, showcases the exceptional quality gained from using Dulux products and commercial services. Designed by Richard Priest of Hilary Priest Architects and documented by Clark Brown Architects, The Docks comprises four buildings of seven storeys, plus basement carparking, all linked by courtyards.

The architects chose neutral colours; the main colour of the pre-cast concrete walls is Dulux Half Lyttleton. The wall cladding was done in Dulux Juvenile, a dark green-grey, and the profile ribbed concrete panels are Dulux Maraetai. The powder coat colour of the joinery is from the Dulux Metropolis range, called Dulux Electric Cow.

Bill Rattenbury of Clark Brown Architects says, "We were pleased to use Dulux. They were very helpful and provided good support".
