

SKOPE Industries Limited is a family-owned New Zealand company. Based in Christchurch and operating since 1945, SKOPE is a market leader in the design, manufacture and supply of commercial refrigeration and domestic heating. With the largest design and innovation centre of its kind in Australasia, SKOPE has gained a reputation for producing the best-performing and highest-quality products in the market.

SKOPE is always striving to improve the energy efficiency and sustainability of its products so that commercial refrigeration cabinets perform better with lower energy use and are much more environmentally friendly. A SKOPE refrigeration cabinet made today can use around half of the energy of a cabinet made 10 years ago thanks to advancements in technology and design. For example, a single new SK1000 cabinet can save up to \$400 a year when compared to alternatives.*

SKOPE was an early adopter of environmentally friendly initiatives such as CFC-free refrigerants, and all its commercial refrigeration products are designed to perform optimally as well as reduce greenhouse gas emissions and energy costs. With the development of new products, like the Blast Chiller Series, businesses can pre-prepare meals in advance without compromising the texture and flavour of the food. With rapid pull down times, Blast Chillers ensure food safety standards are met and allow for strict portion control, preventing food and time wastage.

SKOPE has also been heating homes for over four decades. The heating needs of every home are different and SKOPE recognises this and offers a total heating solution that can be tailored to individual needs. The range offers outstanding value through energy efficient electric heat with low installation and purchase costs, with no regular maintenance or cleaning requirements.

*calculated at 18c/kwh using non-perishable power save mode (business hours 8am-10pm, 7 days).
