

Commitment to the Environment

Environmental protection - a key company goal

Our strategies:

- Compliance with ISO 14001: 2004 to intensify environmental protection activities both in the manufacturing facilities and the outside world.
- Adherence to an environmental management policy defined by our management
- Guidance and instruction of personnel, sub-contractors and suppliers concerning our policy issues

• Purification and recycling installations

Substantial investment in equipment supports our environmental policy

- RTO (Regenerative Thermal Oxidized) installations in the plants and its surroundings
- Collection of dust from shipping, handling, production and processing
- Water filtering and recycling systems save 97% of water used in processing
- Industrial waste recycling

• Raw materials

We aim to use recycled raw material

We avoid using hazardous substances

We store raw materials in a safe, clean environment to prevent seepage into the environment

We endeavor to work with suppliers sensitive to environmental protection practices

• Production

We actively work towards a clean, organized, and safe work environment

We continuously monitor energy usage and efficiency

We consistently strive to use recycled materials for developing and manufacturing our products

• Products

Our output protects the environment and the wellbeing of our customers

- Non-toxic in accordance with international NSF 51 standards
- Totally inert via a singular and controlled manufacturing process
- Non-porous to prevent surface mold and microbes
- Low maintenance to decrease detergent usage
