 and Builder may be obtained on request.*

This modern BDO building is clad in glass. Glass is great for letting natural light into the building, however heat gain and increased energy consumption is the cost.

The solution for this building was to install Energy Management Film, thus lowering the thermal gain, improving the air conditioning system efficiency and providing an indoor comfort level acceptable to staff.

This Energy Management solution can be applied to commercial buildings large or small.

Ask HPWF to provide a complimentary Energy Analysis Audit for your building today. Simply visit the website for details.
