and Builder may be obtained on request.*

This WINZ building used Haze window film to control the heat and glare to their office. This innovative and creative solution can be applied in a myriad of designs, limited only by your imagination.

The possibilities for HPWF Lateral window design and decorative film is endless. It provides a multifunctional design tool that is inexpensive, yet highly flexible.

Lateral digital graphic design and decorative film can serve as an identity marker for office areas, work cells, business units and can serve as a backdrop for retail or corporate identity.

Lateral frosted films can create privacy, whilst allowing the transmission of natural light.

When used in offices it can also save on the capital cost of conventional window furnishings and their ongoing maintenance.

Ask HPWF to provide an 'in-house' solution to your design challenge today. Simply visit the website for details.
