

PVS750 "Linear Series" Ultra Low Profile Gas Hob

Simple, symmetrical design combined with high quality materials and innovation have created the exclusive PVS750. One of the newest additions to the Smeg range, the 74cm PVS750 with a smooth touch silver glass base extends the aesthetic line "Linear Series". Also available with a smooth touch graphite glass base, it is possible to match the PVS750 with standard ovens, compact ovens, microwave lift up doors or a hood, all with similar "Linear Series" aesthetics. [Click here](#) to view a full product specification.

The smooth touch silver glass base is finger-print proof - a special coating ensures that the hob surface stays in optimum condition.

Individual removable steel and cast iron pan stands provide a solid and stable cooking surface.

Innovative control knobs are illuminated when the burner is activated. This unique feature creates a visual gas safety system - if a burner is accidentally extinguished a safety valve will turn off the gas supply and the control knob light is also turned off. If no lights are on then you know immediately that no gas is on.

It boasts 5 high efficient directional flame burners, including a centre ultra rapid burner with 5kW of power.

The ultra low profile finish with a stainless steel trim gives simple, elegant, smooth installation lines. The overall effect is that of a hob fitted flush with the worktop.

Automatic ignition, safety valves, and an LPG kit are standard features.

CS15 - SMEG 90CM STAINLESS STEEL FREESTANDING COOKER

The clean symmetrical cut with its eight oven functions including rotisserie, this Smeg Freestander is a winner in any kitchen. The single piece hob surface makes it very easy to clean and maintain. It has five gas burners including the work burner. With 3.5kW of power and placed centrally, it allows you to utilize all the other burners without losing any heat from the flames.

The freestander comes with a Utility compartment to store food and plates. The oven door is double glazed making the glass door cool to touch and capturing all the heat within the oven to cook the food evenly.

Automatic ignition, safety valves, and an LPG kit are standard features.

This product will be available from the middle of March
