

Sustainability: What we are doing differently

At Winstone Wallboards our commitment to minimising our impact on the environment has lead to:

- Undertaking a vigorous Life Cycle Analysis of our plasterboard manufacturing processes and identifying areas for improvement
- Reducing greenhouse emissions by 20% over the past 15 years, and continuing to monitor and mitigate further into the future
- Recycling the plasterboard end saw dust back into the manufacturing process
- The new cut-to-length service reduces on-site waste of GIB® plasterboard
- Diverting all manufacturing waste GIB® plasterboard away from landfill and into compost.

In recognition of our efforts, we've received Environmental Choice certification for our GIB® plasterboards 13mm or greater in thickness.

If we all do our bit and continue to monitor, manage, and mitigate our environmental impact we will deliver back a New Zealand that our grandchildren can enjoy.

Note: Environmental Choice labelling applies to all GIB® plasterboard 13mm thickness and greater
