

## GreenStuf® & QuietStuf®

What's behind the wall really does count. Just because your insulation is out of sight, it shouldn't be out of mind. You have the choice to secure peace of mind in knowing that the insulation you specify today will be safe for your clients, their families and our environment – forever.

When you specify Autex [GreenStuf®](#) and [QuietStuf®](#) polyester insulation you're choosing to make a difference.

GreenStuf® thermal insulation and QuietStuf® acoustic insulation products are made from 100% polyester fibres – one of the worlds most commonly used fibres. Polyester has been used in our clothing, bedding products and commercial fabrics for many years due to its safety, durability and thermal efficiency. These same characteristics are found in Autex's range of quality insulation products.

Polyester is the name of the fibre extruded from PET plastic; used to make our milk bottles and plastic bags etc. Polyester and PET can be recycled indefinitely.

Autex takes its responsibilities seriously when it comes to resource use. We are using more and more 'already recycled fibre' – that is polyester fibre that has been made from recycled PET plastics. Our GreenStuf® now contains a minimum of 45% already recycled fibre, and some of our QuietStuf® products are made from up to 85% already recycled fibre. We manufacture all of our insulation products under strict ISO9001 quality control systems and our 'Zero Waste Policy' where manufacturing off-cuts and waste are reprocessed or recycled.

[GreenStuf®](#) and [QuietStuf®](#) products do not contain any chemical binders or additives such as formaldehyde binders which are still used in some fibre-glass insulation products. Formaldehyde is a known and classified human carcinogen. All Autex insulation products are manufactured from 100% polyester fibres. We use heat to bond the fibres and form the structure of the insulation material. This process is known as 'thermal bonding' and ensures the material will not slump, sag or reduce its performance over time (50+ year durability rating).

GreenStuf® and QuietStuf® products are non-toxic, non-allergenic, non-irritant and completely safe – forever.

Autex Insulation offers a full range of product solutions for residential and commercial buildings. For product and supply information please contact your local Autex Representative on 0800 428 839, or [email](#) us for technical support.
