

TECHNICAL DETAILS SLIDING GATES

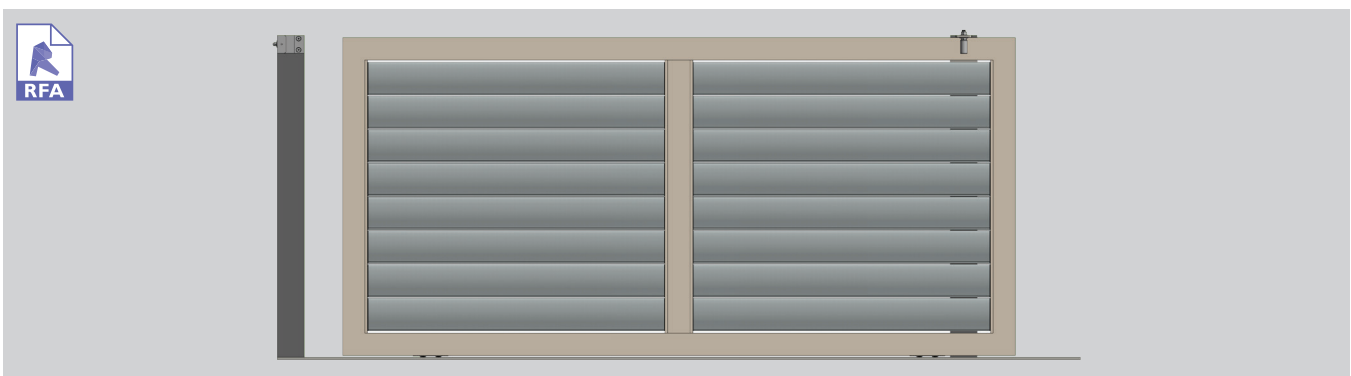

## SLIDING GATES

perfect for spanning wider openings

Louvretec sliding gates are designed and built to the same high standards as hinged gates.

Sliding gates can span up to 5500mm as a single panel unit running on two wheels and are ideal for spanning wider openings in a single panel. Gate frame sections can be either butt joined or "secret welded" and powdercoated to a high spec finish. Louvretec does not undertake gate motorisation/security options but works with a number of specialist companies in this field – contact your Louvretec Dealer for further details.
