

Heradesign® offers an infinite variety of acoustic solutions. Whether they are used for ceilings or walls, all over the room or focussed on a specific area, or whether you prefer a neutral, colourful or rather a natural look ... the options are endless.

ACOUSTIC PERFORMANCE

Heradesign® is an exceptionally good absorber because the wood fibres used in Heradesign® give it a porous, diffuse surface. This means that instead of sound hitting a flat surface and reflecting, it hits the diffuse surface and is both absorbed and diffused.

Heradesign®'s outstanding sound absorption properties mean that when used in conjunction with a layer of insulation, weighted sound absorption values up to NRC 0.95 can be achieved.

15MM HERADESIGN FINE

Ceiling / Wall Cavity		Frequency (Hz)						a_w	NRC
Insulation type	(mm)	125	250	500	1000	2000	4000
