

# Viking Protection Sheet

## Viking Protection Sheet

The Viking Protection Sheet is a soft polypropylene protection sheet that is laid over a new membrane roof or deck installation to protect the membrane throughout construction. It is secured using a durable, heavy-duty, polyethylene tape that will stay in place for up to 6 months.

The Viking Protection Sheet has a high wear and puncture resistance. It is extremely flexible and is supplied in lightweight, easy-to-install rolls. The protective sheet will resist heavy foot traffic and won't break down with UV exposure. The majority of construction materials will not affect the sheet's ability to protect the membrane.

The tape's backing is stabilised to resist the effects of UV exposure. The tape is designed to hold its seal in all weather conditions. At the end of construction it will remove cleanly and leave little or no adhesive residue on the membrane.

The sheet comes in a width of 3.8m and can be supplied per metre in any length up to 61m long. The tape is 50mm wide and comes in rolls of 50m.

### Product Codes:

Viking Protection Sheet – SRG003

Polyethylene Tape – SPT001
