CHARGING SURFACE

Introducing
DUPONT™ CORIAN®
CHARGING SURFACE

Now you can enjoy a solid surface
that will charge smart devices **wirelessly.**

Tactile, seamless, hygienic, renewable, formable – every stylish colour and pattern of Corian®, is available for wireless charging integration.

Not only does its flowing form provide virtually limitless design options, Corian® Charging Surface is the perfect addition to modern smart homes, retail environments and more.

HOW DOES IT CHARGE UP?

Just below the Corian® Charging Surface, a transmitter transfers energy wirelessly to a receiver within or attached to your smart device. Plus, the surface is smart – charging stops when your device has reached maximum battery capacity. It's the ideal solution for kitchens, hospitality areas – almost anywhere!

On the outside, this is our signature,
stylish Corian® solid surface.

**WHAT MAKES THIS UNIQUE
IS WHAT'S UNDERNEATH.**

**Hidden from view is a transmitter
that powers up smartphones, tablets
and more, wirelessly.**

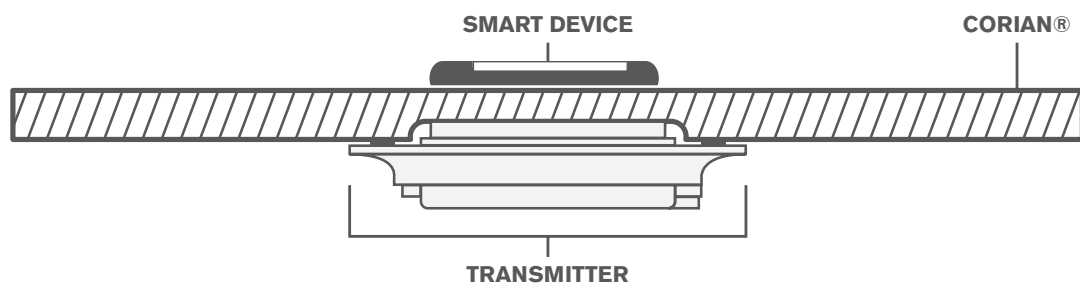

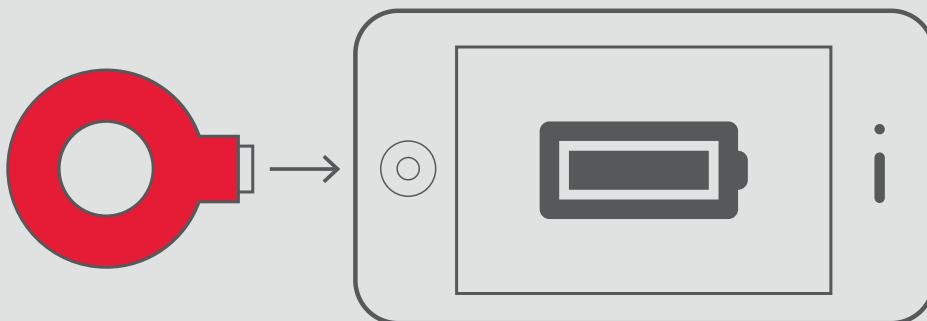

Diagram illustrates placement of Individual Charging Unit.

HERE'S HOW TO WIRELESSLY CHARGE SMART DEVICES IN YOUR BUSINESS:

1. Select your new Corian® surface from the colours and patterns available.
2. Decide where in your designs a charging surface(s) will work best.
3. A Corian® Authorised Fabricator* will install the device(s) along with the surface installation.
4. Once installed, place your wireless enabled device** (or connect a Powermat® wireless charging ring for non-wireless enabled devices) over the charging spot and charge up begins automatically. Charging stops when the battery is full.

IT'S THAT SIMPLE!

Visit corian.co.nz for more info.

*An Authorised Corian® Fabricator/Installer has the required expertise to install the Individual Wireless Charging unit underneath the Corian® surface. This requires the fabricator/installer to mill out an area on the underside of the Corian® surface to enable the induction process to occur.

**If a device is already Qi or PMA enabled, a wireless charging ring or charging case to power up will not be required.
