

A minimum of 20mm gap between the bottom purlin and Over Fascia Vent must be realised for air flow into the roof cavity.

FOR ALL SCILLION ROOF SITUATIONS USE VENT G2500N

STEEL PROFILED ROOF CLADDING NO EAVES

VENT Over Fascia Vent -G2500N (recommended for roof pitches under 15 degrees and skillion roofs)

(25,000 m² lin/m)

THIS IS A SUGGESTED METHOD OF VENTILATION BUT THE OVERALL DESIGN AND DIMENSIONS ARE THE RESPONSABILITY OF THE DESIGNER IN COMPLIANCE WITH THE NZ BUILDING CODE.
