

Protecto Wall

Tanking System for use on concrete, masonry and polystyrene structures as a positive protection against water, salts and certain acids and alkalis.

Wall area is primed before installation.

All corners and penetrations are detailed for added protection.

Expansion joints are maintained using detail tape with a slip film.

Protecto Wall is applied horizontally or vertically.

Sheets overlap a min. of 50mm. Bonding together to form a continuous waterproof seal.

Membrane and joints are rolled to enhance adhesion.

All joints, penetrations and terminations are dressed with JS160 Mastic.

Pro-Drain 8 should be applied to protect the membrane.

Benefits of Protecto Wall Tanking System

- Professionally installed by Certified Installers – Nationwide.
- 50 year durability.
- Sheet membrane waterproofing for peace of mind.
- Clean, efficient and cost effective installation.
- BRANZ Appraised #517 (2013).
- The membrane is inert, inorganic and will never rot, decay or be affected by bacteria/fungus.
- The membrane is reinforced with a strong high tensile, inert reinforcement to withstand puncture and severe stress to 425 Psi.
- Suitable as a DPM below slab.
- Not suitable where hydrostatic pressure exists.
