

GW 300

Guardrail & Walkway Systems

Our roof access guardrail systems are manufactured with high-grade aluminium for application on any roof surface, with permanent or fold down options to suit the aesthetic requirements of the building.

Sayfa's walkway systems provide a designated access path in potentially unsafe environments. Ideally suited for roof deck areas where frequent access is required, our walkway systems, available in high-grade aluminium or fibreglass, are manufactured with advanced grip surfaces for maximum traction. Walkways also protect roof surfaces from damage and leaks that occur as a result of frequent foot traffic from maintenance personnel.

Compliance

Sayfa's range of guardrail and walkway systems complies with Australian Standard AS 1657-2013.

Applications

- Access to roof mounted mechanical plant and equipment
- Brittle rooftops where fall protection is required
- 'Safe to Walk' demarcation for maintenance personnel
- Provide roof deck and fall protection for gutter cleaning

Product Range

SENTRY / PACE600 / ON-TRAK / TRAKTITE / PROTEX

GENERAL REQUIREMENTS OF AUSTRALIAN STANDARDS

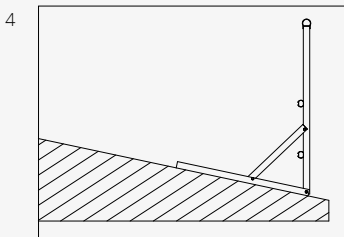

Guardrail Height
Minimum height for guardrailing is 900mm from the walking surface.

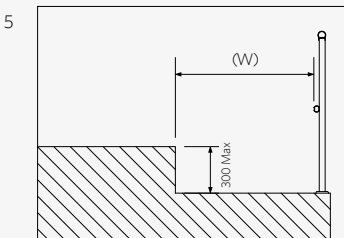

Width Between Guardrails
Distance between guardrails, intermediate rails or toe boards shall not be less than 550mm
Minimum width of walkway must be 600mm

Guardrail on Sloping Roofs (Across Slope)
Guardrail is required if the area adjacent to the walking area is 12° or greater.

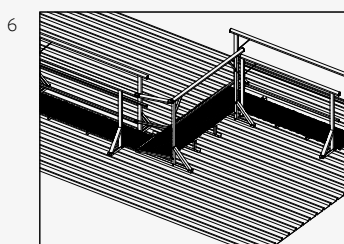

Guardrail on Sloping Roofs
If there is guardrail on the edge of the roof where the slope is 12° or greater, a third rail is recommended.

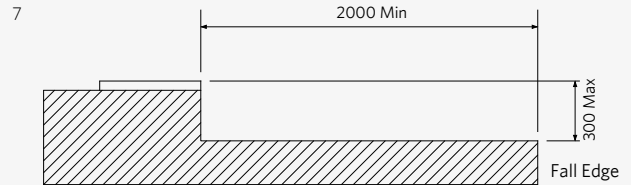

Guardrail on Platforms
Height of Guardrail to be as follows

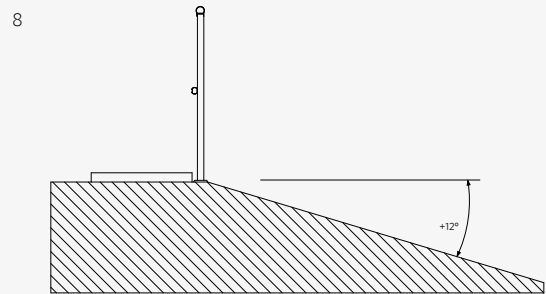

- Where width (W) is not less than 1 000mm, height shall be min 900mm.
- Where width (W) is less than 1 000mm, height shall be increased by 300mm.

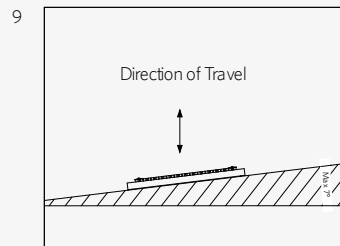

Walkway on Sloping Roofs (Along Slope)
Walkways between 12° & 20 deg, a handrail shall be provided. Where there is a risk of a person rolling or sliding along the sloping surface of the walkway, the distance shall be limited to 1.8m (linear). A gate or change-in-direction is required if greater than 18 metres.

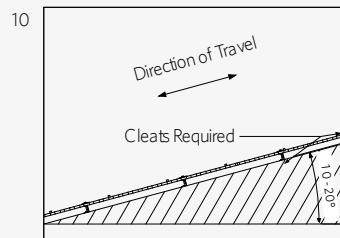

Guardrail is not required if the area adjacent to the walkway is not more than 300mm below the walking surface and is more than 2000mm from a fall edge.

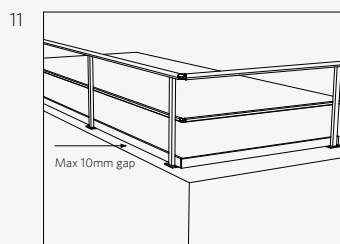

Guardrail is required if the angle of slope of the adjacent area to the walkway is more than 12° regardless of proximity to a fall edge.

Walkway on Sloping Roofs (Across Slope)
Maximum cross slope of walkway is 7° in the direction of travel. Preferred cross slope angle is 3°.

Walkway on Sloping Roofs (Along Slope)
Walkway can be used in the range from 0° - 20°. Any walkway slope from 10° - 20° will need cleats installed.
Cleat Spacings:
Slopes 1 0° - 1 5° - 450mm
Slopes 1 5° - 1 8° - 400mm
Slopes 1 8° - 2 0° - 350mm

A toe board shall be installed on the edge of a platform or walkway where there is no permanent structure within 100mm of the edge and from which an object could fall to where persons have access to the area and to the side of a walkway. Maximum gap between the toe board and platform deck is 10mm.

! This document does not in any way replace the full Australian standard document which must be read and understood prior to installation of this system.
