

Niagara TOP

Greater efficiency, unlimited supply...catering to all your water requirements!

Niagara water coolers are robust and reliable professional units. Aimed at facilitating drinking water management and improving efficiency, they comply with the very highest standards in terms of product performance and quality.

All models are certified and are ideal for large-scale applications. Their cutting-edge technology allows large amounts of still and sparkling water to be dispensed. Niagara water dispensers can be used to fill jugs or cups, for a practical, quick and low-cost alternative.

This product is easy to place on bar and restaurant counters, in cafés or on worktops; its reduced depth facilitates positioning in areas where space is limited.

It optimises dispensing and eliminates bottled water management, offering the same high performance levels as the floor-standing model.

The Chilled and Sparkling Bench-top Drinking water system comes with filtration system and CO2 regulator.
