

# custom *Balustrades*

The previous are all typical examples from our modular Clearspan, Clearview and Pureview series of balustrades. However, with Spectrum Aluminium's in-house design, engineering, manufacturing team and our years of experience, both Spectrum and it's agents can offer a full custom balustrade design and build service to satisfy individual requirements.

There are limitless designs and high quality materials such as aluminium, glass and stainless steel from which to choose. Previous examples include modern Louvre infill, stainless steel wire infill, timber capped handrail and custom solid infill. We have the balustrade design skills to match your architectural styling needs.
