

Wavin SiTech+

for low-noise
soil & waste drainage

Wavin SiTech+

System description

Wavin SiTech+ is a mineral reinforced polypropylene (PP) soil and waste system. The system offers increased robustness, low-noise properties and improved ease of installation.

We have increased the weight of the fittings by 20% for improved acoustic comfort during water flow. Its flexible connectivity and push-fit system makes SiTech+ a complete plug and play solution for waste water discharge in buildings.

Quality of living is an important consideration in building design. A reduction of noise in water discharge systems improves end-experience in both living and working environments. Wavin SiTech+ meets the latest construction requirements and fulfills customers' demand for increased comfort and quality.

Key system benefits

▶ **Less noise**

20% heavier fittings set a new market standards in this segment. SiTech+ is a high performance system that reduces the acoustics of water flow.

▶ **Easier to install**

Ribbed fittings provide enhanced grip for easy installation in complex environments. SiTech+ is perfect for any project, from small renovations to large-scale construction jobs.

▶ **Angular rotation guidance**

Fittings have different markings at 15° and 45° intervals for easy alignment. SiTech+ makes it easy to align fittings which need to be positioned at a rotated angle.

▶ **Insertion depth check**

Ribs on the spigots of the fittings checks complete insertion into the socket. These easily visible SiTech+ markings can also confirm the exact 10 mm space needed to cope with thermal expansions at long pipe lengths.

▶ **New black color**

The new black color adds to the durability and robustness of SiTech+. The black color improves protection against UV radiation when stored outside at a building site. Furthermore the matte black finish is less sensitive to dirt and gives the system a professional appearance.

Application

Wavin SiTech+ meets all standards set for soil & waste discharge systems (EN 1451-1), including noise reduction and fire resistance (EN 13501-1). The emitted noise level of SiTech+ is measured by the Stuttgart Fraunhofer Physical Constructions Institute (DIN EN 14366).

Wavin SiTech+ is the ideal solution for installation in multi-storey building and those that are particularly sensitive to noise like apartment buildings, hotels, offices, hospitals, elderly homes and libraries.

Wavin SiTech+ can be used for water discharge at temperatures up to 90°C, with peaks of to 95°C for short periods. It can also be used at low temperatures up to -20°C. This durability makes it an ideal solution for extreme-temperature drainage areas such as kitchens, laundromats and industrial waste environments.

Please contact Wavin if you have any questions about particular application environments.

The system is offered in a full range of diameters:

- ⊕ 32 mm
- ⊕ 40 mm
- ⊕ 50 mm
- ⊕ 75 mm
- ⊕ 90 mm
- ⊕ 110 mm
- ⊕ 125 mm
- ⊕ 160 mm

Special fittings

The Wavin SiTech+ portfolio includes specialized fittings for easier and more efficient installation and use, particularly in areas where space is limited.

Shower branches provide an easy connection of both the toilet and shower to the down pipe.

Swept branches, as compared to sharp angle fittings, allow water to run more smoothly while reducing overall noise levels, improve the ventilation and increase the flow rate.

The new design of access pipes makes inspection easier.

WaterMark

AS/NZS 7671: 2010

WM 74576

Installation

Handling

- ⦿ Handle pipes and fittings with care. Excessive scratching or impact stress on the pipe may damage the external structure or affect the seal properties.
- ⦿ Loose pipes need to be unloaded by hand. When pipes are inserted one inside the other, always remove the inside pipe first.
- ⦿ When bundles of pipes are unloaded by fork truck, we recommend the wrap nylon sheaths around metal forks or use plastic forks. Metal forks, hooks and chains may not come in contact with the pipes. Do not use forks with an extension.
- ⦿ If the loading or unloading is carried out with a crane and excavator arms, the pipes must be raised in the central area with a sling of adequate width.

Unloading strapped pallets.

Transport

- ⦿ Wavin SiTech+ pipes, when no longer packed in original packaging, must be stored fully supported over their total length on a clean surface during transport.
- ⦿ Bending of the pipes should be avoided.
- ⦿ Impact stress on pipe and fittings must be prevented.

Transport of loose Wavin pipes.

Storage

- ⦿ Always store pipes on a flat surface.
- ⦿ Pallets must be stored at a maximum height of 1.5 m without additional supports or side barriers.
- ⦿ Loose pipes:
 - must have at least 2 side supports equally spread over the pipe length,
 - maximum height of storing loose pipes is 1.5 m.,
 - the ideal situation is to support the loose pipes along their whole length. If this is not possible, place wooden supports of at least 75 mm wide under the pipe at a distance of maximum 1 m.,
 - stack the different sizes of pipes separately or, if this is not possible, stack them with the largest diameters on the bottom,
 - socketed pipes should be stacked in an alternating order to secure support over the full pipe length (see picture).
- ⦿ Fittings are supplied in carton boxes and must be stored indoors. Deformation resulting from excessive loads on the fittings should always be avoided.
- ⦿ Store lubricant in a cool place, away from heat sources or direct sunlight.

Cutting pipes

1. Cut the pipe cleanly at a right angles to its axis. Whenever possible, use a pipe cutter.

2. De-burr the cut end with a scraper.

3. Chamfer the pipe end 5 mm over the length of the pipe, at 15°.

Ring seal / push-fit jointing

1. Ensure the pipe cut is chamfered.
2. Check that the sealing ring is properly seated in the seal groove of the fitting or pipe.
3. Ensure all components to be joined are dry, clean and free from dirt or dust. Ensure that there are no deep scratches on the pipe or fitting spigot as these may prevent the sealing ring from forming a watertight seal.
4. Lubricate evenly around the pipe or fitting spigot using Wavin lubricant. Do not use oils or greases.
5. Correctly align the components to be joined.
6. Push the pipe or fitting spigot fully into the socket. When inserting a pipe length of 2 metres or more, mark the pipe spigot at the socket face and then withdraw it by 10 mm to allow for thermal expansion.
7. Make a subsequent check to ensure that the expansion gap is not lost during further installation work.

Installation

Pipe supports

- Use only rubber lined pipe clamps to minimise structure borne sound.
- Pipes should be supported at the following maximum distances:

OD [mm]	Maximum supporting distances	
	Vertical [m]	Horizontal [m]
32	1.50	0.50
40	1.50	0.60
50	1.50	0.75
75	2.00	1.10
90	2.00	1.35
110	2.00	1.65
125	2.00	1.85
160	2.00	2.40

- Ensure the pipe system is installed free of tension.
- Fixed-point brackets prevent pipe movement after the screws are tightened. After tightening the screws of a sliding bracket the pipe can still be moved through the bracket.
- For every pipe of length of 2 metre or more, place a fixed-point bracket directly next to the socket, as shown at point ①.
- For vertical pipes, the fixed-point bracket always needs to be installed at the top side of the pipe underneath the socket. Ensure that the expansion gap of 10 mm at the spigot end ② is not lost during placement of the fixed-point bracket.
- Next to each fitting, or groups of fittings, always a fixed-point bracket should be installed.
- Any additional pipe brackets, both for vertical as well as horizontal pipes, must be fitted as a sliding bracket ③ to allow for linear expansion due to changes in temperature.
- If there is an option to fix the bracket to different walls, always take the wall with the highest mass.
- Sections of piping with fittings or short pipes must be secured with pipe brackets at intervals short enough to ensure that they cannot slide apart.

Pipe routing and special fittings

Vertical soil stack to horizontal

- Never use a 90° bend when connecting a vertical soil stack to a horizontal pipe, always use two 45° bends.
- In buildings with more than three storeys, (>10 metre soil stack) install a 250 mm pipe between the two 45° bends, when space allows. This 250 mm straight area in the bend will reduce the noise created by the water flowing from the soil stack to the horizontal collector pipe.
- Secure a proper fixation of this part by using two fixed point brackets ①, one fixed to a short piece of pipe fixing in the vertical plane and one fixed point bracket as close as possible to the socket of the first horizontal pipe.

Floor and ceiling crossings

- Floor and ceiling crossings must be made both moisture resistant and soundproof using e.g. mineral wool or foam material.

Shower branch

- For an economic and easy installation of a toilet and waste pipes separately to the soil stack you can use a Shower branch ①.

Fire collars

OC's to write own text depending on local range of fire collars and local fire regulations.

Installation

Repairs using HepSure rubber repair couplers

If a pipe section needs to be replaced or a Tee piece needs to be added to the pipe system, please follow the following procedure.

1. Cut out the part which needs to be replaced. When inserting a Tee piece at a later stage, please secure that the level of the branch is located at the right height.

The Z1 value is mentioned for each Tee piece in the product overview.

2. Slide the HepSure rubber repair coupler completely over the existing pipe.
3. Secure that the pipe (or pipe and Tee piece) has the same length as the part which has been cut out.
4. Measure half of the repair coupler length (60 mm). Measure the same length (60 mm) from the new pipe ends and mark the pipe.

5. Insert the new pipe (pipe with Tee piece) and slide the HepSure repair couplers to the marked positions.

6. Tighten the screws to ensure a water tight connecting and no movement.

Repairs using repair couplers

If a pipe section needs to be replaced or a Tee piece needs to be added to the pipe system, please follow the following procedure.

1. Cut out the part which needs to be replaced. When inserting a Tee piece at a later stage, please secure that the level of the branch is located at the right height. The Z1 value is mentioned for each Tee piece in the product overview.

2. Install a short piece of temporary pipe halfway onto the repair coupler to secure a correct positioning of the rubber seal.

3. Install the free half of the coupler onto the existing pipe and slide the repair coupler completely over the existing pipe.

4. Secure that the pipe (or pipe and Tee piece) has the same length as the part which has been cut out.

5. Measure half of the repair coupler length. Measure the same length from the new pipe ends and mark the pipe.

6. Install as close as possible to the two pipe ends wall plates for the fixed-point brackets and mount the threaded rod and back part of the brackets. When fixing the repair couplers with tensile resistant clamps this step can be skipped.

7. Install a tensile resistant clamp on each repair coupler to ensure no movement.

Installation

Repairs using a long socket and repair coupler

- Finalise the installation of the fixed-point brackets or install a tensile resistant clamp on each repair coupler to ensure no movement.

- When inserting a Tee piece at a later stage, please secure that the level of the branch is located at the right height. The Z1 value is mentioned for each Tee piece in the product overview.

- When inserting a Tee piece, the length of the part to be cut out should have the length of the Tee piece (L) + 20 mm + the length of the spigot of the long socket (Q).

When replacing a piece of pipe, secure that the total length of the new socketed pipe (L) equals the length of the part cut out minus the length of the spigot of the Tee piece (Q) minus 20 mm.

- Install close to the two pipe ends wall plates for the fixed-point brackets and mount the threaded rod and back part of the brackets. When fixating the repair couplers with tensile resistant clamps this step can be skipped.

4. Install a short piece of temporary pipe halfway onto the repair coupler to secure a correct positioning of the rubber seal.
5. Install the free half of the coupler onto the existing pipe and slide the repair coupler completely over the existing pipe.

6. Slide the long socket over the other pipe end.

7. Push the socketed end of the Tee piece or pipe on to the long socket.

8. Push the long socket with the Tee piece or pipe till the two pipe ends meet.
9. Finalise the installation of the fixed-point brackets or install a tensile resistant clamp on the long socket to ensure no movement.
10. If a pipe is inserted, measure half of the repair coupler length. Measure the same length from the new pipe end and mark the pipe.

Installation

11. Slide the repair coupler over the spigot end of the Tee piece or to the marking on the pipe.

12. Finalise the installation of the fixed-point bracket or install a tensile resistant clamp on the repair socket to ensure no movement.

Technical data

Wavin SiTech+

Wavin SiTech+ is an innovative soil and waste system with proven low noise technology.

Technical features:

- ⦿ Optimized 3-layer pipe structure for reduced noise levels
- ⦿ Mineral reinforced polypropylene (PP) material for high durability and heat-resistance
- ⦿ Socketed connections and prefabricated elastomer gaskets (SBR) for fast, easy and secure installation
