

Slimline Aluminium Joinery
Joins that just fit

**Designed to protect and control
how panels meet, finish and fix.**

Stickman® is a slimline aluminium joinery system for MDF and other wood composite panels, designed to bring panels together cleanly; with tight lines, consistent joins, and alignment that works every time.

More than a set of profiles, the Stickman range of corners, edges, joins and fixing solutions form a connected system for deliberate, consistent details across interior spaces.

**Turn joins into a deliberate
part of panel designs.**

Give your panel work a sharper, more considered finish and create consistent details across an entire space.

Built for real world use. Stickman slimline aluminium joinery is easy to work with, quick to install (on site when required), and protects panel edges from wear and impact.
