

Snow Guard

Continuous Snow Hooks and Straps have been designed to protect spouting & fascia systems against snow damage. However in line with the Continuous philosophy “We Made It First, We Make It Last”, Continuous have gone one step further and now introduce Snow Guard. Snow Guard is a device that is mounted to a sloped roof surface. It prevents a potentially damaging single release of snow and ice from the sloped roof (similar to an avalanche of snow on a mountainside).

Snow or freezing rain accumulates on a sloped roof surface, and as heat from the building and / or exterior temperatures rise above freezing, a film of water develops between the roof surface and the snow and ice. This water functions like a lubricant, making the roof surface almost frictionless. Without a prevention device, the accumulated snow and ice can then slide off the roof surface in one big release, causing a great deal of damage: gutters and plumbing vents are often stripped from the roof, property damaged, expensive landscaping is destroyed, and most importantly, people can be injured.

Snow Guard is a low profile discreet and inexpensive solution to protecting your home against the many damaging effects of rapid snow displacement, from long run iron roofs. Snow Guard, Snow Brackets can be supplied in colour to match your roof or spouting.

Applications	-	All residential and commercial buildings
Roof Material	-	Long run iron roof only
Spouting Profile compatibility	-	All profiles
Installation Requirements	-	Each roof must be assessed by a Continuous Group representative. Recommendations will be made on the assessment of roof length and pitch.
Recommendation		For best results Snow Guard should be installed with Continuous Group Spouting, Snow Straps or Hooks
