

Lossnay Filtration Range

The Mitsubishi Electric Lossnay Fresh Air Heat Recovery Ventilation range offers a wide range of filtration options, which are classified as good, better and best, to help match varying application requirements.

Below is a brief summary on the different levels of filtration each filter option can provide.

Good – Standard Filters

Standard filters such as G3/G4 grade are capable of filtering out coarse dust particles that are up to 60% of size 10 microns, or larger particles such as cement dust (fly ash), insects, sand, pollen, hair particles and asbestos.

Maintenance cycle – Can be washed to clean and reuse every 6 months. Filter replacement is recommended every 2 years.

Better – Medium Grade

A medium grade filter such as the G4/M6 offers slightly finer filtration of dust particles ranging from size 1 micron to 10 micron. This filter can efficiently filter out up to 99.99% of 10-micron particles and up to 65% of 1-micron particles such as sand, pollen, bacteria, fly ash, construction dust, mould spores, rodent extracts, asbestos, viruses and pathogens.

Maintenance cycle – Annual replacement is recommended for medium grade filters.

Best – High Efficiency Grade

M6/F7/F9/MERV 16 higher-grade filters are used to filter out finer particles of size 0.1 microns. These are usually used for healthcare environments.

Maintenance cycle – Annual replacement is recommended for high grade filters.

Particle Sizes

Lossnay Filter Range Tables

To order replacement filters and cores or optional upgrades, please use one of the following tables to select your Lossnay model, and the required filter and core replacement type. The product code and the number of filters and cores included are indicated.

Please note, when using a high efficiency filter, the air volume of the Lossnay unit will decrease by approximately 5 – 15% due to the higher density of the filter material. Please make sure to adjust the fan speed to make the supply air volume and the exhaust air volume equal.

Table Guide	
Model Contains:	The number of units each model contains as standard.
Model Requires:	The number of units each model requires.
Product Code:	The BDT product code you can use to order.
Sold As:	The quantity of units per BDT product code.
