DORMA AGILE 150/AGILE 150 Syncro Kleinste Abmessungen – bestens genutzt

Perfekte Laufschienegeometrie

Höhe 63 mm x Breite 54/57/72 mm (Decken-/Wand-/ Seitenteilversion) – das sind die entscheidenden Maße dieser neuen Generation von Ganzglasschiebetürsystemen. Trotz dieser geringen Abmessungen konnte beim AGILE 150 die komplette Technik in die Laufschiene integriert werden. Was übrig bleibt ist lediglich ein filigranes, elegantes Profil, das bisher benötigte Deckprofile überflüssig macht. Es kann in allen bekannten Eloxal- u. RAL-Farbtönen oberflächenbehandelt werden. Stabilität und Verwindungssteifigkeit sind weitere wichtige Details der neuen Laufschienegeometrie.

Geringe Spaltmaße

Minimale Abmessungen der Laufschiene und Integration der kompletten Technik in die Laufschiene ergeben zwangsläufig geringste Spaltmaße zwischen Glas und Wand oder Glas und Glas. Je nach Montageart ergeben sich Maße zwischen 10 mm (bei 13,5 mm Glasstärke) und 16 mm (bei 8 mm Glasstärke).

Aufwendige Rollentechnik

AGILE 150 wird unterschiedlichsten Kundenwünschen bis hin zu hohen Anforderungen gerecht: Mit nur zwei wartungsfreien Klemm-Laufwagen können Glaselemente bis zu 150 kg bewegt werden. Dies wird durch eine spezielle Rollentechnik gewährleistet, die sich bei Anwendungen mit Horizontal-Schiebewänden (HSW) seit Jahren bewährt hat. Bezüglich der Leichtläufigkeit erfüllt AGILE nach DIN EN 1527 die Kriterien der Klasse 3 – das bedeutet, dass maximal 4% der Türmasse als Anfangsreibung bewältigt werden müssen,

um die Tür in Bewegung zu bringen. Somit ist gewährleistet, dass auch große Türen ohne besonderen Kraftaufwand betätigt werden können.

Leichtläufigkeit nach DIN EN 1527, Klasse 3 (Beispiel):

Glasblatt Höhe	3.000 mm
Breite	1.400 mm
Dicke	12 mm
Gewicht	128 kg

Erlaubte Anfangsreibung nach DIN EN 1527: 51 N
Erreichte Anfangsreibung mit AGILE 150: 22 N.

Sicherer Stopp

Selbstverständlich werden die Türen sowohl beim Schließen als auch beim Öffnen in den Endpositionen durch einen eigens entwickelten Fangpuffer sanft gebremst sowie zuverlässig gehalten.

Elegante Bodenführung

Die neue AGILE Bodenführung aus Zinkdruckguss besticht durch ihre attraktive Form. Genial einfach die Verstellmöglichkeit für die unterschiedlichen Glasstärken: Durch einen drehbaren Kunststoffeinsatz werden Glaselemente von 8 - 13,5 mm Stärke sicher geführt.

Ein System – viele Lösungen

AGILE bietet Vielseitigkeit im wahrsten Sinne des Wortes: Die Anbringung kann wahlweise über Wand-, Decken- oder Sturzmontage erfolgen, ein- oder zweiflügelig und auch mit feststehenden Seitenteilen.

Keine Glasbearbeitung

Wo Klemmtechnik Anwendung findet, wird Glasbearbeitung überflüssig. Mit den Besonderheiten des Werkstoffes Glas bestens vertraut wurde die Aufhängung so ausgelegt, dass die Scheiben allein durch Klemmwirkung sicher gehalten werden. Die Montage erfolgt einfach und problemlos, der Zeitaufwand – auch bei der Glasproduktion - reduziert sich auf ein Minimum. Die variablen Klemm-Laufwagen fassen standardmäßig Glasstärken zwischen 8 und 12 mm. Unter Verwendung bei uns erhältlicher Zubehörkomponenten können auch Glasstärken von 13,5 mm (VSG aus ESG) eingesetzt werden. Weiterer Vorteil des Klemm-Laufwagens: Auch nach der Glasmontage ist ein Höhenausgleich von +/- 5 mm durchführbar.

Langlebigkeit

In Dauertests mit über 100.000 Bewegungszyklen (nach DIN EN 1527) konnte eine sehr hohe Langlebigkeit nachgewiesen werden. Auch in punkto Korrosionsbeständigkeit befinden Sie sich mit AGILE 150 auf höchstem Niveau. Einem Einsatz in Feuchträumen spricht nichts entgegen.

Komfortable Syncro Version

Auf Wunsch ist AGILE auch in einer Syncro Version lieferbar. Mit dieser Ausstattung öffnen sich doppelflügelige Schiebetüranlagen in einer gegenläufigen Bewegung durch Betätigung nur eines Flügels. Nahezu unsichtbare und bewährte Seilzug- und Umlenktechnik macht diesen Komfort möglich.

Baukastensystem

Einfache Handhabung und ein ausgeprägter Systemgedanke erleichtern Ihnen die Planung mit AGILE 150. Mehrere Set-Lösungen für unterschiedliche Montagesituationen, aber auch individuell angepasste Lösungen stehen zur Verfügung.

Bodenführung

Floorguide

DORMA AGILE 150/AGILE 150 Syncro

Tiny dimensions – tremendous benefits

Superb track geometry

Height 63 mm x width 54/57/72 mm (ceiling/wall/side screen version) – these are the telling dimensions of the AGILE 150 - a new departure in tempered glass sliding door systems. Moreover, all the operational equipment has been integrated out of sight within the track section - despite its dainty size. All that remains on view is an elegantly and intricately designed profile that eliminates the need for the cover sections required by other systems. It can be surface-treated in all the well-known anodised finishes and RAL colours. Stability and torsional stiffness constitute further important properties inherent in the new track geometry.

Minimal gap

The minimised dimensions of the track profile and integration of the complete operational equipment within its section automatically give rise to very small clearances between the glass and wall or glass / glass components. Depending on the fixing method, gaps from just 10 mm (13.5 mm glass thickness) to 16 mm (for a glass thickness of 8 mm) are typical.

Sophisticated track roller technology

The AGILE 150 is able to meet a wide variety of customer requirements - up to and including their highest demands. Just two maintenance-free clamp-type carriers can support and transport glass panels of up to 150 kg. This is ensured by their special

track roller technology, one which has proven successful over many years in applications involving horizontal sliding walls (DORMA HSW systems). In terms of ease of operation, AGILE is able to satisfy the Class 3 criteria of EN 1527 – and that means a force equivalent to just 4 % max. of the door mass needs to be applied in order to overcome the initial friction and thus set the door in motion. So there is a guarantee that even large doors can be operated without undue effort.

Ease of operation acc. to EN 1527, Class 3 (example:)

Glass pane height 3,000 mm
width 1,400 mm
thickn. 12 mm
weight 128 kg

Allowed initial friction acc. to EN 1527: 51 N
Reached initial friction with AGILE 150: 22 N.

Reliable stop

The doors are, of course, gently decelerated as well as being reliably held in both their closed and opened states by specially developed catch-type buffers.

Elegant floor guide

The new zinc die cast floor guide for AGILE captivates with its attractive shape. Brilliant the possibility of adjustment for different glass sizes: With a rotating plastic insert glass elements of 8 to 13.5 mm thickness will be guided safely.

One system – many solutions

The AGILE 150 offers versatility in the truest sense of the word. The system can be fixed at the wall, to the ceiling or along a lintel in either its single-panel or double-panel configuration, and with or without fixed side screens.

No glass preparation

With clamp-type fittings, the need to drill and cut the glass is eliminated. Based on wide-ranging glass fabrication expertise, the suspension mounting has been designed so that the panels can be safely retained by the clamping effect alone. Installation is simple and uncomplicated and the time required – including that for glass panel production – is reduced to a minimum. The variable clamp-type carriers

are able – as standard – to engage glass thicknesses between 8 and 12 mm. And by using accessories available from us, glass thicknesses of 13.5 mm (LSG from TSG) can also be accommodated. A further advantage of the clamp-type carrier: even after the installation of the glass panels, in situ vertical adjustment of +/-5 mm can be carried out as required.

Long service life

The exceptional longevity of the system has also been proven in protracted tests involving more than 100,000 operating cycles (performed to DIN EN 1527). And you will also find that the AGILE 150 takes corrosion resistance to a new level. So there are no obstacles to its installation and use in damp areas.

Convenient Syncro version

The AGILE system is also available in a "Syncro" version. In this configuration, double-panelled sliding door sets open and close as bi-parting doors when just one of the panels is operated. A virtually invisible and thoroughly proven cable and pulley return system ensures the long-term availability of this enhancement in operating convenience.

Modular system

The inherent handling ease coupled with a thoroughly systematic approach will greatly facilitate your planning work when implementing the AGILE 150 concept. Several set solutions for different fixing situations are available, as are individually tailored configurations.

Tiny dimensions – tremendous benefits

Superb track geometry

Height 49 mm x width 46 mm (ceiling/wall/side screen version) – these are the telling dimensions of the AGILE 50 - a new departure in tempered glass sliding door systems. Moreover, all the operational equipment has been integrated again out of sight within the track section - despite its dainty size. All that remains on view is an elegantly and intricately designed profile that eliminates the need for the cover sections required by other systems. It can be surface-treated in all the well-known anodised finishes and RAL colours. Stability and torsional stiffness constitute further important properties inherent in the new track geometry.

Minimal gap

The minimised dimensions of the track profile and integration of the complete operational equipment within its section automatically give rise to very small clearances between the glass and wall or glass.

Sophisticated track roller technology

The AGILE 50 is able to meet a wide variety of customer requirements - up to and including their highest demands. Just two maintenance-free clamp-type carriers can support and transport glass panels of up to 50 kg. This is ensured by their special track roller technology. In terms of ease of operation, AGILE is able to satisfy the Class 3 criteria of EN 1527 – and that means a force equivalent to 30 N needs to be applied in order to overcome the initial friction and thus set the door in motion.

Reliable stop

The doors are, of course, gently decelerated as well as being reliably held in both their closed and opened states by specially developed catch-type buffers.

Elegant floor guide

The floor guide for AGILE captivates with its attractive shape. Brilliant the possibility of adjustment for different glass sizes: With a rotating plastic insert glass elements of 8 to 13.5 mm thickness will be guided safely.

One system – many solutions

The AGILE 50 offers versatility in the truest sense of the word. The system can be fixed at the wall and to the ceiling.

No glass preparation

With clamp-type fittings, the need to drill and cut the glass is eliminated. Based on wide-ranging glass fabrication expertise, the suspension mounting has been designed so that the panels can be safely retained by the clamping effect alone. Installation is simple and uncomplicated and the time required – including that for glass panel production – is reduced to a minimum. The variable clamp-type carriers are able – as standard – to engage glass thicknesses between 8 and 10 mm. A further advantage of the clamp-type carrier: even after the installation of the glass panels, in situ vertical adjustment of +5/-3 mm can be carried out as required.

Long service life

The exceptional longevity of the system has also been proven in protracted tests involving more than 50,000 operating cycles (performed to DIN EN 1527). And you will also find that the AGILE 50 takes corrosion resistance to a new level. So there are no obstacles to its installation and use in damp areas.

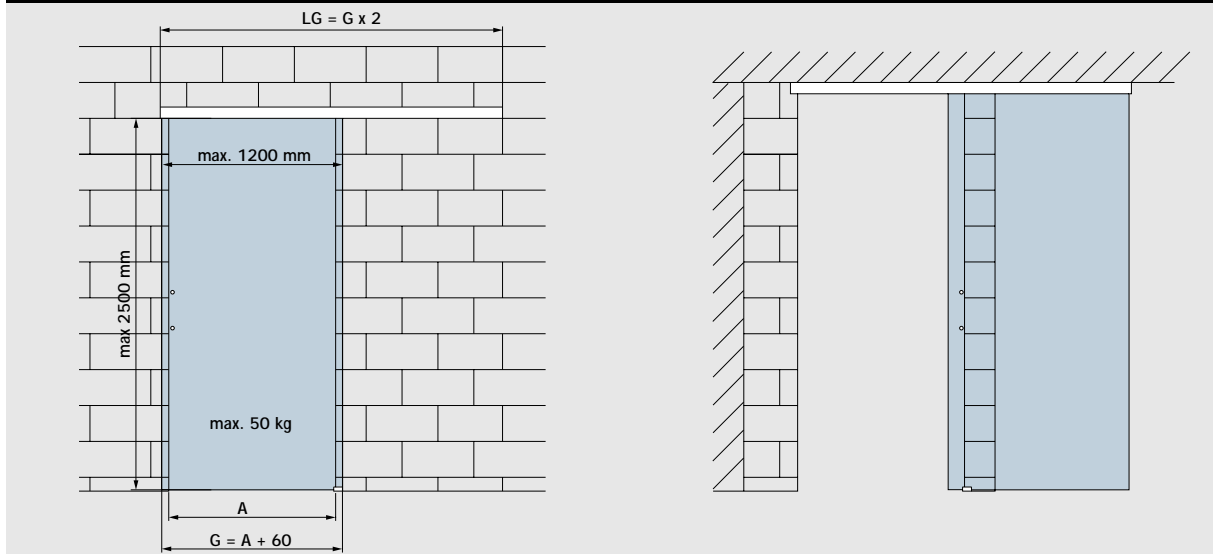

Modular system

The inherent handling ease coupled with a thoroughly systematic approach will greatly facilitate your planning work when implementing the AGILE 50 concept.

Several set solutions for different fixing situations are available.

DORMA RS 120/RS 120 Syncro DORMA RS 120/RS 120 Syncro

Stabile Laufschienen

Die Laufschienen sind als Hohlprofile leicht und zugleich stabil und verwindungssteif. Sie können direkt an der Decke oder Wand befestigt werden und lassen sich problemlos auf die erforderliche Einbaulänge kürzen. Die ballige Ausbildung der Laufflächen verhindert Schmutzablagerungen.

Clipsbare Verkleidungen

Die Verkleidungen werden von Leichtmetallprofilen gebildet, die sich einfach an die Laufschienen clipsen lassen. Bei deckenbefestigten Schienen werden sie auf beiden Seiten, bei wandbefestigten auf der freien Seite angebracht. Auch die Verkleidungen können problemlos auf Länge geschnitten werden.

Seitenteilprofil

Für feststehende Seitenteile steht ein in die Laufschiene einhängbares Profil zur Verfügung, welches im oberen Bereich das Glas im richtigen Abstand zur Laufschiene aufnimmt. Nach dem Einhängen wird das Profil an der Laufschiene verschraubt.

Selbstverständlich ist auch am Seitenteilprofil für eine Aufnahme der clipsbaren Verkleidungsprofile gesorgt. Außerdem kann mit einem unteren Sichtschutzprofil das freie Seitenteilprofil im Durchgangsbereich von unten verkleidet werden.

Leicht und leise laufende Laufwagen

Die Laufwagen laufen auf großen, nadelgelagerten Kunststofflaufrollen leicht und geräuscharm. Sie sind aus hochwertigem, glasfaserverstärktem Kunststoff hergestellt, korrosionsbeständig und hoch belastbar.

Arretierung in den Endpositionen

In den Laufschienen verstellbar angeordnete Endanschläge sorgen mit praktischen Fangvorrichtungen dafür, dass die Laufwagen, und damit die Türen, in den Endpositionen zuverlässig festgehalten werden.

Syncro-Version

Durch eine spezielle Seilzugtechnik und Umlenkmechanik kann für eine doppelflügelige Anlage ein synchron öffnendes System realisiert werden. Da nur noch ein Flügel bewegt werden muss, ist größtmöglicher Bedienungskomfort für maximale Durchgangsbreiten gewährleistet.

Keine Glasbearbeitung

Mit den Besonderheiten des Werkstoffes Glas bestens vertraut, hat DORMA-Glas die Aufhängungen der Schiebetürsysteme RS so ausgeführt, dass die Scheiben allein durch Klemmwirkung sicher gehalten werden. Außerdem ermöglichen die Aufhängungen einen Höhenausgleich, ohne das bereits geklemmte Glas demontieren zu müssen.

Rugged track

The hollow profiled aluminium track is light yet rugged and resistant to twisting. It can be fixed directly under the ceiling or onto a wall. Cutting to the required size is simplicity itself. The raised, convex profile of the rail surface prevents dust and dirt collecting.

Clip-on covers

The covers are made of aluminium, and are easily clipped onto the track. If the track is top fixed, onto the ceiling, the covers are used on both sides; if the track is side fixed, the cover is used on the exposed side only. The covers also can easily be cut to size.

Side panel profile

A special profile to be hung and screwed into the track is available for the use with fixed side panels. It ensures that the side panel glass is mounted with the correct distance to the track. As a matter of course the side panel profile can be provided with clip-on covers. Furthermore the free side panel profile in the passage area can be covered from below by a bottom view protection profile.

Gentle, easy action

The carriers run on large nylon wheels, with needle bearings, giving a quiet and very low friction ride. They are made from high grade, glass fibre reinforced nylon, which is corrosion-resistant and extremely strong.

End stop and holder

There is a clever device in the track which operates as a cushioned end stop, retaining the door securely in the end positions.

Syncro-Version

By a special cable and deflection device a synchronously opening system for a two-panel assembly can be realised. For only one of the panels has to be moved, a biggest possible operating convenience for maximum passage width is guaranteed.

No glass preparation

DORMA-Glas has a wide experience in working with toughened glass, and this has led to the development of a clamping system which is all that is required for securing the glass blades in DORMA RS sliding door gear. This has the additional benefit of allowing some door height adjustment, after the doors is hung, without dismantling the already fixed glass.

auf 4 Glasbohrungen
Art.-Nr. 21.276

Pair of handle bars
Satin stainless steel,
for 8/10/12 mm
glass thickness

Length 350 mm
2 hole fixing
Order No. 21.267

Length 720 mm
2 hole fixing
Order No. 21.270

Length 1240 mm
3 hole fixing
Order No. 21.273

Length 1760 mm
4 hole fixing
Order No. 21.276

Bei Griffstangenlänge 350 mm
Length of handle bar 350 mm

Allgemeine Pflege der Beschläge

Die Oberflächen der Beschläge sind nicht wartungsfrei und sollten gemäß ihrer Ausführung gereinigt werden.

- Für metallische Oberflächen (Eloxaltöne, Edelstahl) bitte nur geeignete Reiniger ohne Scheuermittelanteil verwenden.
- Für lackierte Oberflächen bitte nur entsprechende lösemittelfreie Reiniger verwenden.

General care instructions for the fittings

The surface finishes of the fittings are not maintenance-free and should be cleaned according to their material and design.

- For metallic surfaces (anodised finishes, stainless steel) please use appropriate cleaning agents without abrasive additives only.
- For varnished surfaces please use appropriate solvent-free cleaning agents only.

Angaben über die Beschaffenheit oder Verwendbarkeit von Erzeugnissen bzw. Materialien dienen der Beschreibung. Zusagen in Bezug auf das Vorhandensein bestimmter Eigenschaften oder einen bestimmten Verwendungszweck bedürfen stets besonderer schriftlicher Vereinbarungen. Abbildungen zeigen z. T. Sonderausführungen, abweichend vom Standard-Lieferumfang.

Technische Änderungen vorbehalten.

Statements made with regard to the nature or use of the products are for the purposes of description. Assent with regard to the existence of particular properties or particular uses always requires special written agreement. Pictures may show special designs which are different to the standard scope of delivery.

DORMA AGILE 150/AGILE 150 Syncro

Tiny dimensions – tremendous benefits

Superb track geometry

Height 63 mm x width 54/57/72 mm (ceiling/wall/side screen version) – these are the telling dimensions of the AGILE 150 - a new departure in tempered glass sliding door systems. Moreover, all the operational equipment has been integrated out of sight within the track section - despite its dainty size. All that remains on view is an elegantly and intricately designed profile that eliminates the need for the cover sections required by other systems. It can be surface-treated in all the well-known anodised finishes and RAL colours. Stability and torsional stiffness constitute further important properties inherent in the new track geometry.

Minimal gap

The minimised dimensions of the track profile and integration of the complete operational equipment within its section automatically give rise to very small clearances between the glass and wall or glass / glass components. Depending on the fixing method, gaps from just 10 mm (13.5 mm glass thickness) to 16 mm (for a glass thickness of 8 mm) are typical.

Sophisticated track roller technology

The AGILE 150 is able to meet a wide variety of customer requirements - up to and including their highest demands. Just two maintenance-free clamp-type carriers can support and transport glass panels of up to 150 kg. This is ensured by their special

track roller technology, one which has proven successful over many years in applications involving horizontal sliding walls (DORMA HSW systems). In terms of ease of operation, AGILE is able to satisfy the Class 3 criteria of EN 1527 – and that means a force equivalent to just 4 % max. of the door mass needs to be applied in order to overcome the initial friction and thus set the door in motion. So there is a guarantee that even large doors can be operated without undue effort.

Ease of operation acc. to EN 1527, Class 3 (example:)

Glass pane height 3,000 mm
width 1,400 mm
thickn. 12 mm
weight 128 kg

Allowed initial friction acc. to EN 1527: 51 N
Reached initial friction with AGILE 150: 22 N.

Reliable stop

The doors are, of course, gently decelerated as well as being reliably held in both their closed and opened states by specially developed catch-type buffers.

Elegant floor guide

The new zinc die cast floor guide for AGILE captivates with its attractive shape. Brilliant the possibility of adjustment for different glass sizes: With a rotating plastic insert glass elements of 8 to 13.5 mm thickness will be guided safely.

One system – many solutions

The AGILE 150 offers versatility in the truest sense of the word. The system can be fixed at the wall, to the ceiling or along a lintel in either its single-panel or double-panel configuration, and with or without fixed side screens.

No glass preparation

With clamp-type fittings, the need to drill and cut the glass is eliminated. Based on wide-ranging glass fabrication expertise, the suspension mounting has been designed so that the panels can be safely retained by the clamping effect alone. Installation is simple and uncomplicated and the time required – including that for glass panel production – is reduced to a minimum. The variable clamp-type carriers

are able – as standard – to engage glass thicknesses between 8 and 12 mm. And by using accessories available from us, glass thicknesses of 13.5 mm (LSG from TSG) can also be accommodated. A further advantage of the clamp-type carrier: even after the installation of the glass panels, in situ vertical adjustment of +/-5 mm can be carried out as required.

Long service life

The exceptional longevity of the system has also been proven in protracted tests involving more than 100,000 operating cycles (performed to DIN EN 1527). And you will also find that the AGILE 150 takes corrosion resistance to a new level. So there are no obstacles to its installation and use in damp areas.

Convenient Syncro version

The AGILE system is also available in a "Syncro" version. In this configuration, double-panelled sliding door sets open and close as bi-parting doors when just one of the panels is operated. A virtually invisible and thoroughly proven cable and pulley return system ensures the long-term availability of this enhancement in operating convenience.

Modular system

The inherent handling ease coupled with a thoroughly systematic approach will greatly facilitate your planning work when implementing the AGILE 150 concept. Several set solutions for different fixing situations are available, as are individually tailored configurations.

DORMA
AGILE 50

DORMA AGILE 50

Tiny dimensions – tremendous benefits

Superb track geometry

Height 49 mm x width 46 mm (ceiling/wall/side screen version) – these are the telling dimensions of the AGILE 50 - a new departure in tempered glass sliding door systems. Moreover, all the operational equipment has been integrated again out of sight within the track section - despite its dainty size. All that remains on view is an elegantly and intricately designed profile that eliminates the need for the cover sections required by other systems. It can be surface-treated in all the well-known anodised finishes and RAL colours. Stability and torsional stiffness constitute further important properties inherent in the new track geometry.

Minimal gap

The minimised dimensions of the track profile and integration of the complete operational equipment within its section automatically give rise to very small clearances between the glass and wall or glass.

Sophisticated track roller technology

The AGILE 50 is able to meet a wide variety of customer requirements - up to and including their highest demands. Just two maintenance-free clamp-type carriers can support and transport glass panels of up to 50 kg. This is ensured by their special track roller technology. In terms of ease of operation, AGILE is able to satisfy the Class 3 criteria of EN 1527 – and that means a force equivalent to 30 N needs to be applied in order to overcome the initial friction and thus set the door in motion.

Reliable stop

The doors are, of course, gently decelerated as well as being reliably held in both their closed and opened states by specially developed catch-type buffers.

Elegant floor guide

The floor guide for AGILE captivates with its attractive shape. Brilliant the possibility of adjustment for different glass sizes: With a rotating plastic insert glass elements of 8 to 13.5 mm thickness will be guided safely.

One system – many solutions

The AGILE 50 offers versatility in the truest sense of the word. The system can be fixed at the wall and to the ceiling.

No glass preparation

With clamp-type fittings, the need to drill and cut the glass is eliminated. Based on wide-ranging glass fabrication expertise, the suspension mounting has been designed so that the panels can be safely retained by the clamping effect alone. Installation is simple and uncomplicated and the time required – including that for glass panel production – is reduced to a minimum. The variable clamp-type carriers are able – as standard – to engage glass thicknesses between 8 and 10 mm. A further advantage of the clamp-type carrier: even after the installation of the glass panels, in situ vertical adjustment of +5/-3 mm can be carried out as required.

Long service life

The exceptional longevity of the system has also been proven in protracted tests involving more than 50,000 operating cycles (performed to DIN EN 1527). And you will also find that the AGILE 50 takes corrosion resistance to a new level. So there are no obstacles to its installation and use in damp areas.

Modular system

The inherent handling ease coupled with a thoroughly systematic approach will greatly facilitate your planning work when implementing the AGILE 50 concept.

DORMA
RS 120/
RS 120 Syncro

DORMA RS 120/RS 120 Syncro DORMA RS 120/RS 120 Syncro

Stabile Laufschielen

Die Laufschielen sind als Hohlprofile leicht und zugleich stabil und verwindungssteif. Sie können direkt an der Decke oder Wand befestigt werden und lassen sich problemlos auf die erforderliche Einbaulänge kürzen. Die ballige Ausbildung der Laufflächen verhindert Schmutzablagerungen.

Clipsbare Verkleidungen

Die Verkleidungen werden von Leichtmetallprofilen gebildet, die sich einfach an die Laufschielen clipsen lassen. Bei deckenbefestigten Schienen werden sie auf beiden Seiten, bei wandbefestigten auf der freien Seite angebracht. Auch die Verkleidungen können problemlos auf Länge geschnitten werden.

Seitenteilprofil

Für feststehende Seitenteile steht ein in die Laufschiene einhängbares Profil zur Verfügung, welches im oberen Bereich das Glas im richtigen Abstand zur Laufschiene aufnimmt. Nach dem Einhängen wird das Profil an der Laufschiene verschraubt.

Selbstverständlich ist auch am Seitenteilprofil für eine Aufnahme der clipsbaren Verkleidungsprofile gesorgt. Außerdem kann mit einem unteren Sichtschutzprofil das freie Seitenteilprofil im Durchgangsbereich von unten verkleidet werden.

Leicht und leise laufende Laufwagen

Die Laufwagen laufen auf großen, nadelgelagerten Kunststoffaufröllen leicht und geräuscharm. Sie sind aus hochwertigem, glasfaserverstärktem Kunststoff hergestellt, korrosionsbeständig und hoch belastbar.

Arretierung in den Endpositionen

In den Laufschielen verstellbar angeordnete Endanschläge sorgen mit praktischen Fangvorrichtungen dafür, dass die Laufwagen, und damit die Türen, in den Endpositionen zuverlässig festgehalten werden.

Syncro-Version

Durch eine spezielle Seilzugtechnik und Umlenkmechanik kann für eine doppelflügelige Anlage ein synchron öffnendes System realisiert werden. Da nur noch ein Flügel bewegt werden muss, ist größtmöglicher Bedienungskomfort für maximale Durchgangsbreiten gewährleistet.

Keine Glasbearbeitung

Mit den Besonderheiten des Werkstoffes Glas bestens vertraut, hat DORMA-Glas die Aufhängungen der Schiebetürsysteme RS so ausgeführt, dass die Scheiben allein durch Klemmwirkung sicher gehalten werden. Außerdem ermöglichen die Aufhängungen einen Höhenausgleich, ohne das bereits geklemmte Glas demontieren zu müssen.

Rugged track

The hollow profiled aluminium track is light yet rugged and resistant to twisting. It can be fixed directly under the ceiling or onto a wall. Cutting to the required size is simplicity itself. The raised, convex profile of the rail surface prevents dust and dirt collecting.

Clip-on covers

The covers are made of aluminium, and are easily clipped onto the track. If the track is top fixed, onto the ceiling, the covers are used on both sides; if the track is side fixed, the cover is used on the exposed side only. The covers also can easily be cut to size.

Sidelight profile

A special profile to be hung and screwed into the track is available for the use with fixed sidelights. It ensures that the sidelight glass is mounted with the correct distance to the track. As a matter of course the sidelight profile can be provided with clip-on covers. Furthermore the free sidelight profile in the passage area can be covered from below by a bottom view protection profile.

Gentle, easy action

The carriers run on large nylon wheels, with needle bearings, giving a quiet and very low friction ride. They are made from high grade, glass fibre reinforced nylon, which is corrosion-resistant and extremely strong.

End stop and holder

There is a clever device in the track which operates as a cushioned end stop, retaining the door securely in the end positions.

Syncro-Version

By a special cable and deflection device a synchronously opening system for a two-panel assembly can be realised. For only one of the panels has to be moved, a biggest possible operating convenience for maximum passage width is guaranteed.

No glass preparation

DORMA-Glas has a wide experience in working with toughened glass, and this has led to the development of a clamping system which is all that is required for securing the glass blades in DORMA RS sliding door gear. This has the additional benefit of allowing some door height adjustment, after the doors is hung, without dismantling the already fixed glass.

DORMA
BEYOND

Konsequentes Design Systematic design

Sicher, funktional und optisch perfekt präsentiert sich DORMA BEYOND, das einzigartige System zum klemmfreien Drehen von Glastüren.

Die Entwicklung von DORMA BEYOND ist geprägt von der Forderung nach modernem, attraktivem Design und dem Anspruch nach höchst möglicher Sicherheit und Stabilität.

Der Rollenwagen wird verdeckt im Rundprofil geführt. Durch die gelenkige Lagerung der Rollachse wird eine gleichmäßige Beanspruchung der beiden parallel laufenden Rollen gewährleistet. Laufruhe und optimiertes Laufverhalten sind selbstverständlich.

Darüber hinaus sprechen konsequente Form und klare Linienführung für sich.

Mit DORMA BEYOND eröffnen sich vielfältige Möglichkeiten, rahmenlose Glastüren in Ganzglas-Anlagen oder Maueröffnungen zu integrieren.

Das neue System bietet für jedes Milieu – ob privat oder öffentlich, ob modern oder klassisch – eine elegante, technisch perfekte Lösung.

Der Einsatz dieses am Bedarf der Praxis orientierten Produktes ist überall dort eine sinnvolle Alternative, wo Sicherheit und Funktionalität im harmonischen Kontext mit attraktivem Design realisiert werden.

Safe, functional and extremely attractive, DORMA BEYOND, the unique system for glass doors. It guarantees the ultimate user convenience with sliding doors.

The development of DORMA BEYOND has been shaped by the search for a solution that combines a modern, attractive design with maximum safety and stability.

The round profile fitting integrates completely the roller carriers. The articulated mounting of the roller spindle guarantees equal loading of the two parallel-running rollers. This ensures that optimised door movement and almost silent operation come as standard.

Ideally coordinated for glazed sliding doors, the BEYOND range is characterised by its systematic design and clear styling lines.

DORMA BEYOND opens up a huge range of opportunities for incorporating frameless glass doors into toughened glass assemblies and wall openings. The new BEYOND system offers an elegant, technically perfect solution for sliding doors in all situations, whether private or public, modern or traditional.

Developed with the practical requirements of the market in mind, this product offers a sensible alternative wherever security, safety and functionality need to be complemented with an attractive design.

DORMA BEYOND – Schiebetür-Lösungen

DORMA BEYOND – sliding door solutions

DORMA BEYOND Schiebetürbeschläge sind genauso vielseitig, sicher und Design orientiert wie ihr Pendant für Anschlag- und Pendeltüren. Ob Wandmontage oder Integration der Glastür in eine Ganzglas-Anlage (mit Oberlicht und Seitenteil) BEYOND präsentiert sich in jedem Umfeld funktional, technisch ausgereift und gestalterisch gelungen. Lastabtrag von Oberlicht und Seitenteil kann mit Wandanschlussprofilen erfolgen. Die für die Schiebetür vorgegebene Glasdicke beträgt 10 mm. Oberflächen für Schiebetürbeschläge und Zubehörteile: Aluminium eloxiert, LM EV 1-Decko (114) oder LM ähnlich Niro matt (107).

Für das sichere und präzise Abbremsen der Schiebetür

sorgt der in die Laufschiene integrierte Stopper. Dieser kann in seiner Position jederzeit verändert werden.

Die Funktionsprüfung nach DIN EN 1527 hat das DORMA BEYOND Schiebetür-System erfolgreich absolviert. Das Ergebnis: Einstufung der Dauerhaftigkeit in Klasse 5 mit 50 000 Bewegungszyklen. Die Klassifizierung der Anfangsreibung gemäß Klasse 3 entspricht max. 40 N.

Max. Türgewicht: 80 kg

Standardsets für lichte Türweiten von 850/1000/1250/1500 mm

Max. Oberlichthöhe: 600 mm

Mindestabstand der Laufschiene zu Wand und Decke: 250 mm

DORMA BEYOND sliding door fittings are just as versatile, safe, secure and stylish as their counterparts for single-action and double-action doors. Whether for wall mounting or for integration in a toughened glass assembly (with over panel and sidelight), the BEYOND system offers a functional, technically proficient and stylish solution for any environment. Load transfer from the over panel and sidelight can be effected by means of wall adapter profiles. The specified glazing thickness for the sliding door is 10 mm. Finishes for sliding door fixings and accessories aluminium anodised, alumin. EV 1-Decko (114) or similar to alumin. satin stainless steel (107).

The stopper, which is integrated in the track rail, ensures reliable and precise slowing of the sliding door. Its position can be changed at any time.

The DORMA BEYOND sliding door system has successfully completed the DIN EN 1527 functional test. Results: durability test to Class 5 (50,000 motion cycles); initial friction to Class 3 (corresponds to max. 40 N).

Max. door weight: 80 kg

Standard sets for clear opening widths of 850/1000/1250/1500 mm

Max. over panel height: 600 mm

Min. gap of track rail to wall and ceiling: 250 mm

Bei der Wandverbindung ist der Beschlag für die rechte und linke Türposition gleich.

Sliding door set wall for single door mounted onto wall. With the wall connection, the fitting for the RH and LH door position is identical.

**MANET
COMPACT**

MANET Schiebetürsystem

MANET COMPACT Schiebetürsets aus hochwertigem Edelstahl setzen dezent und wirkungsvoll gestalterische Akzente in jedem Raum.

Frei positionierbare Stopper und verschiebbare Klemmhalter in Kombination mit den für 8 mm bis 12 mm ESG ausgelegten Rollenwagen vollenden das formschöne, stimmige Design.

Die auf dem ø 25 mm Edelstahl-Laufschienenrohr befestigten Stopper sorgen für eine sichere Begrenzung des Schiebeweges.

MANET COMPACT Schiebetüren ermöglichen durch Laufrollen ein sauberes und leises Schieben.

Optionale umlaufende Bürstendichtungen bieten verlässlichen Schutz vor Zugluft.

Schiebetüren in Ausführung mit MANET COMPACT Sets können in Glastrennwände aus ESG und auch vor Maueröffnungen eingebaut werden.

Das MANET COMPACT Schiebetürsystem weist eine hervorragende, normgeprüfte Qualität nach EN1527 (Klasse 5) mit wartungs-freien und langlebigen Bauteilen auf.

MANET sliding door system

MANET COMPACT sliding door sets of high-quality stainless steel offer a discrete yet effective enhancement to the ambience of any room.

Freely positionable stops and sliding clamp mountings in combination with the roller carriers designed for 8 mm to 12 mm toughened safety glass (TSG) complete the elegant, coordinated design.

The stops mounted on the 25 mm dia. tubular stainless steel track provide a safe and secure limit to the sliding travel path.

MANET COMPACT sliding doors with their smooth-running track rollers ensure efficient, quiet operation every time.

Optional all-round brush seals provide a reliable protection against drafts.

Sliding doors using MANET COMPACT sets can be incorporated in toughened safety glass partitions and also as face-fixed systems at masonry openings.

The MANET COMPACT sliding door system comes with exceptional quality provided as standard and tested to EN 1527 (Class 5) with maintenance-free and long-life components.

Allgemeine Pflege der Beschläge

Die Oberflächen der Beschläge sind nicht wartungsfrei und sollten gemäß ihrer Ausführung gereinigt werden.

- Für metallische Oberflächen (Eloxaltöne, Edelstahl) bitte nur geeignete Reiniger ohne Scheuermittelanteil verwenden.
- Für lackierte Oberflächen bitte nur entsprechende lösemittelfreie Reiniger verwenden.

General care instructions for the fittings

The surface finishes of the fittings are not maintenance-free and should be cleaned according to their material and design.

- For metallic surfaces (anodised finishes, stainless steel) please use appropriate cleaning agents without abrasive additives only.
- For varnished surfaces please use appropriate solvent-free cleaning agents only.

Angaben über die Beschaffenheit oder Verwendbarkeit von Erzeugnissen bzw. Materialien dienen der Beschreibung. Zusagen in Bezug auf das Vorhandensein bestimmter Eigenschaften oder einen bestimmten Verwendungszweck bedürfen stets besonderer schriftlicher Vereinbarungen. Abbildungen zeigen z. T. Sonderausführungen, abweichend vom Standard-Lieferumfang.

Technische Änderungen vorbehalten.

Statements made with regard to the nature or use of the products are for the purposes of description. Assent with regard to the existence of particular properties or particular uses always requires special written agreement. Pictures may show special designs which are different to the standard scope of delivery.

Subject to change without notice.

MANET CONCEPT

Today's approach to office design tends to be generously appointed, open-plan layouts. One of the basic underlying principles in this regard is that, in order to be effective in business, you need a clear view of everything that is happening.

Consequently, flexible glass partitions and doors are becoming the preferred solution for internal spatial division. Thanks to the flexible modularity of the system, DORMA MANET offers architects and specifiers a free hand in creative almost bespoke design with space, vision and light as a foundation. The basic component is the single-point fixing which is countersunk into the glass and provides for a perfectly flush finish in all applications. In addition to the countersunk version, however, the system now also offers a new

alternative, i.e. whereby the single-point fixing is clamped to the glass surface. When using these mounting elements, glazing systems of 8 mm thickness as well as the usual 10 and 12 mm thicknesses are available as standard applications for sliding doors. Other glass thicknesses may also be available, and the installation of timber doors is likewise possible. Design modifications enable the free combination of various roller carrier and track rail types. Further details can be found in the relevant introductory pages. Adjustable angle connectors provide for reliable attachment to existing structural components or glass-to-glass combinations, with integrated pivoting and sliding door elements complementing the system.

MANET COMPACT Sets

Just as visually effective are the MANET COMPACT standardised sets from the DORMA MANET family. These facilitate single, fast planning of the more popular system types with 8, 10 or 12 mm glass for doors and 10 and 12 mm glass for overpanels and sidelights. Optional accessories are available for increased design variety within the individual sets.

The system components come with numerous adjustment possibilities in order to ensure problem-free installation of the sliding, double action or single action doors. Wall abutment profiles/connectors (for attaching the overpanel and sidelight screens to the existing structure) may need to be provided.

MANET AMBIENT

The remarkable MANET AMBIENT range of hardware breathes new life into furniture creations. Sliding, pivoting, retention – this system transforms the functional into the stylish, affording the designer almost unlimited scope for creativity. Exacting in terms of its concept and engineering excellence, this hardware system is quite unique in a number of ways - not least because the stainless steel fittings are not concealed, serving instead to accentuate exceptional furniture design. The MANET AMBIENT system approach is also reflected in the minimal number of basic components incorporated in the overall range.

At the heart of the system is the rod - the connecting element that also functions as a support, track rail or pivot. Shelf supports and single-point fixings (flush-mounted in the glass) are further components in this kit system with its unique fitting methods, application range and modularity.

MANET AMBIENT is the ideal aesthetic partner not only to glass surfaces but also to fine wood carcass furniture - in offices, foyers, kitchens, living rooms and bedrooms. Hardly surprising, then, that this industrial-quality product range is encountered not only in the project hardware sphere but also, increasingly, in private homes as well.

Sliding
Pivoting
Retention

All the elements including the pull handles are available in an elegant stainless steel finish (AISI 303).

In applications involving corrosive atmospheres, many fittings are also available in stainless steel AISI 316L.

Awarded with the design prize red dot 2002

Needless to say, all DORMA systems are protected by proprietary rights worldwide. We will be glad to provide you with information concerning relevant patents, e.g. PCT/EP03/04299, PCT/EP01/04255 etc. on application.

Single-point fixing series S32/35

The basic component within the MANET system is the single-point fixing. Rather than cylindrical bore in the glass, this has a tapered countersunk bore for a perfect seated fit to the glass. These give a flush finish of the single-point fixing in all applications.

The three-dimensional adjustability incorporated within the fitting ensures ideal compensation for structural and drilling tolerances.

Constraint-free transmission of all the forces acting on the glass to the substructure is also ensured.

Components

- 1 Clip-on cover
- 2 Pin internal thread
- 3 Conical sleeve
- 4 Gasket
- 5 Fixing
- 6 Adjustment screw

Installation and adjustment

- Transfer the drilling points from the installation drawing to the wall.
- Drill anchor holes for wall plugs.
- Undo adjustment fastener and secure to the wall.
- Only lightly tighten fastener so that it can still be moved.
- Mount the fixing and washer and fit the glass.
- Undo the adjustment fastener and then secure in final position.
- Align single-point fixings and secure with grub screw.
- Fit tapered nut and clamping ring and tighten with special wrench (tightening torque 15 Nm).
- Clip on covers.

Connection system

The system approach is very much in evidence in the case of the interconnecting components. Elements such as clamping and angle connectors of various designs and also interconnecting fasteners of various lengths can be combined in order to attach glass of different thicknesses at any required angle to the floor, to ceilings, to walls and to plinth supports. Single-point fixings flush with the glass are also used for this interconnection and glass-to-glass system. Tolerances are compensated by slotted holes in the interconnecting fasteners.

Clamping connector

Ensure compliance with minimum glass/bore clearances as per glass manufacturer recommendations

Corner connector glass/ceiling

Corner connector glass/floor

Ceiling fixing (bearing)

Glass preparation with a tolerance of max. ± 0.3 mm is recommended.

Pivoting door system

MANET pivoting doors can be installed in both glass partitions and masonry openings. They come as both single and double-action swing doors with a maximum weight of 80 kg and a maximum leaf width of 1200 mm.

All the single-point fixings are designed for clip-on covers for easier installation. Other components include the bottom pivot bearing, top pivot fittings with bearing spigot or eccentric bushing and also overpanel/sidelight connectors.

As a result, there are almost unlimited possibilities for integrating frameless swing doors both in masonry openings – with or without overpanels and

sidelights – and in glass partition constructions retained by single-point fixings.

The pivoting door system has undergone a number of improvements. Whether with a full-length pivot rod or a pair of shorter pivot rods, the top bearing socket is now located in the fitting on the door leaf. This means that connection to the ceiling, lintel or transom can now be provided in the form of the standard PT25 top pivot spigot from the DORMA range.

The door assemblies can be equipped with floor springs such as the DORMA BTS 75V, and corner locks are naturally also available.

Glass preparation for pivoting door system

Sliding door system

Roller carrier TREND

Roller carrier CLASSIC

The MANET sliding door system is ideal as an elegant addition complementing high-style interior concepts. Its main components take the form of a solid track rail and the roller carrier. Whether you prefer the TREND or CLASSIC versions, both can be combined with the solid track or a tubular track by simply replacing the anti-jump device. The range includes both glass-flush and proud single-point fixings. The sliding door system allows plenty of scope for individual ideas.

In addition to the standard versions incorporated in toughened glass partitions or face-fixed on masonry openings, this hardware system can also be used to construct curved sliding doors, biparting sliding doors and parallel sliding doors. The fittings are designed for a door weight of max. 120 kg. Mechanical stops that can be positioned on the track rail ensure that the door travel distance is effectively limited.

Solid track rail Supply and installation

Track supply and installation
The track rail for the sliding door is pre-fabricated according to the customer's drawing and supplied together with the glass or wall brackets ordered for the application concerned.

Fixing screws for wall installation by others
Of decisive importance for pre-fabrication and fixing to glass partitions is that the mounting points coincide with the holes drilled in the glass. The lengthwise tolerances should not be greater than +/- 0.3 mm.

Caution! Ensure that the stops/single-point fixings are positioned at locations appropriate to the width of the door.

Required dimensions for the track production

G = Fixing point to glass
W = Fixing point to wall
K = Connection
WK = Angle-connection

* Note!
Ensure that track joints and glass joints do not coincide

Glass preparation for sliding door system

Dimensional data should be regarded exclusively as recommended values. Please remember when designing your system that the positions of the stops and point fixings must not vertically coincide.

For spacing/interval recommendations when drilling the track holes, and for requisite dimensions for fixing the track rail, please refer to the table entitled "Recommended distance of the track fixing points".

Pull handles and door knobs

The pull handle/knob system is designed for glass of 8, 10 and 12 mm thickness. The pull handles can be fixed to both sliding and pivoting (swing) doors on one face using the appropriate connectors or on both faces by through-bolting (back-to-back arrangement). The single-point fixings and through bolts are included as standard equipment in the scope of supply. The pull handles can be fitted horizontally, vertically or in a handrail arrangement.

MANET COMPACT Sets

The aesthetic elegance of the MANET COMPACT concept is also available in the form of standardised sets for simple, fast planning of the more popular system types with 8, 10 or 12 mm toughened safety glass (TSG). Optional accessories enable the individual sets to be semi-customised.

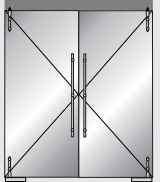

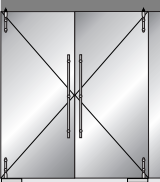

The system components offer numerous adjustment possibilities in order to ensure problem-free installation of whichever door type – sliding or swing, single action or double action – is required. Wall abutment profiles may need to be provided (by others) for fixing overpanels and sidelights.

Set 2

Pivoting door MANET COMPACT with overpanel for 10 - 12 mm glass

Set 2
with pivot rod pair
short type

Option:
Set 2, but with additional intermediate tube for pivot rod pair
in fixed length

Set 2 consisting of:
pivot rod pair top/bottom,
short type,
including:
4 Single-point fixings for pivot rods,
1 Pivot fitting top,
1 Pivot bearing location for overpanel
1 Pivot fitting bottom
for DORMA BTS/floor pivot

Essential information: Panel height _____ mm
- 577 mm
= Length intermed. tube
_____ mm

Door weight
80 kg
Door height
2500 mm
Door width
1200 mm

For the requisite glass preparation
please see pages 20/21

15
Door stop, sliding door

16
Track rail

Single-point fixings

Countersunk holes are required in the glass in order to ensure flush-mounting. The plastic clamping collar protects the glass from direct contact with the stainless steel fitting. The single-point fixing can be adjusted to offset tolerances.

The cover for the single-point fixing can be detached by pressing the edge.

Rods/Track rails

Various rods, likewise made from stainless steel, can be used as track rails or pivots rods for sliding and pivoting doors, and as stabilising components for connecting several furniture elements.

The end faces of the rods are prepared according to their application.

Wall/ceiling connector

Wall/ceiling connectors enable furniture items to be attached on one or two sides to walls and horizontal surfaces as required.

The flange is positioned on the ceiling or floor first.

Next, the relevant rod is placed with a "pressure screw" against the flange (end face with M8 thread).

The sleeve, which is already slid onto the rod, is then screwed to the flange.

Ordering information

Wall/ceiling connector
Art. No. 8.20.760.700.99

Connectors

There are three different connectors in two lengths, all of which are available as fixed or adjustable variants depending on their intended application. The vertical connector is attached on or under a carcass element, and the connector opening is required so that the doors can be slid along the rod.

Horizontal connectors are used to attach rods for the track rail at the front of the carcass. Sleeve-type connectors are used with stabilising rods and with rods for pivoting doors with an outboard furniture hinge.

Mounting

- Screw-fix the base flanges ⑤ in the required position.
- Slide all connectors ① loosely on the rod.
- Fit the connectors ① with the rod onto the base flanges ⑤.
- Temporarily fix the connectors ① to the rod using the small M3 grub screw ②.
- Remove the rod with the pre-fixed connectors ① from the base flanges ⑤.
- Using the large M6 grub screw ④, finally fix the connectors ① in the required position.
- Having assembled the rod and connectors ① fit the assembly to the base flanges ⑤ and secure with the M4 grub screws ③.

Pivoting door, outboard furniture hinge

A feature of the outboard furniture hinge is its right-angled design. This is required in order to attach the hinge on the outside of the carcass (in contrast to an inboard furniture hinge, which is attached inside the carcass, see page 62). A ring is provided within the hinge as a retainer. Inserted plain bearings allow the hinges to pivot about the fixed rod. The outboard furniture hinge permits a door opening angle of up to 270°.

Components of the pivoting door hinge with single-point fixings

Rotating the oval-shaped hole permits vertical and lateral adjustment of ± 1 mm once the pivoting door has been mounted.

Glass preparation see page 55

Pivoting door, inboard furniture hinge

The inboard furniture hinge is attached inside the carcass with the insert rod and the inserts.

The mechanical design of the inserts enables them to be installed in the ready-assembled carcass.

The construction allows a door opening angle of 90°.

Installation of insert rod

Carcass preparations

Drill holes as per drawing.
Using a wood screw, fix the eccentric insert with the thin wall to the front in the hole of the upper shelf.
Place the anti-twist insert with the lug parallel with the front in the bottom hole of the bottom shelf and secure with the pins.
Use a pin punch to drive the pins home.

Preparing the insert rod

Slide the hinges onto the insert rod.
First insert the smooth/unmachined end of the insert rod fully into the top eccentric insert. Swing the insert rod into the carcass.
Insert the slotted end so that it fits into the bottom insert.
Push the insert rod down with sufficient effort to conceal the slot.

Installation of glass

Mount and align the glass door with the single-point fixings.
(Assembly dimension see page 62).

Dismantling of the insert rod

The bottom insert is clamped to the rod and thus prevents unintentional lifting and disengagement. In order to remove the rod, it has to be raised until a sharp-pointed tool (e.g. a flat-tipped screw-driver) can be placed between the insert and the insert rod.
The insert can then be levered out.
The rod can now be pulled forward and down to remove it.

Sliding doors

In the MANET AMBIENT system, the roller is attached directly to the glass. It is aligned via oval-shaped holes in the single-point fixing, which is provided with a cap, as are all single-point fixings in the system. Accessories such as stops and brushes complement the range of components.

Installation examples

Slotted with brush profile

Connector distances

Ls (Hinge distances) = according to weight of sliding door

Weight of sliding door 40 kg Lv/Lh = 600 mm

Door stop

Before installation, slide stop over the rod (freely movable, clamped using M5 grub screw)

DORMA

RSP 80

Platz sparen, Raum schaffen Saving space, creating room

Schiebetüren aus Glas entsprechen genau den Anforderungen der modernen Innenraumplanung: Die Schiebetechnik spart Platz, der Werkstoff Glas schafft zusätzlich optisch mehr Raum. Ob im öffentlichen oder privaten Bereich, Glasschiebetüren erfüllen in Bezug auf Funktion und Design die Ansprüche moderner Architektur.

Sliding doors of glass are the ideal complement to modern interior designs: the sliding mechanism saves space and the transparent effect is predestined to create that desirable impression of optical expanse. Whether in the public or private sector, sliding glass doors satisfy the demands of advancing architecture in relation to both functional efficiency and scintillating elegance.

Leichtigkeit, die rollt Convenience on a roll

Mit DORMA RSP 80 steht nun ein System zur Verfügung, das bereits durch die Materialwahl leicht wirkt und dabei formale Akzente setzt. Die Aluminium-Laufschiene ist als Rundprofil ausgebildet, die über ein spezielles Tragprofil direkt an der Wand befestigt wird. Die Lauffläche bildet ein bündig in die Laufschiene eingeklipstes Kunststoffprofil. Hierüber führt der Rollenwagen sichtbar und leise die Schiebetür. Barrierefreies Rollen bis zum sicheren Stop.

Easy on the eyes with a room-defining design, the material combination of the DORMA RSP 80 ensures unparalleled lightness to the touch. The aluminium track is an extruded round section with a special support profile for direct wall fixing. A flush plastics extrusion clips into the track rail to provide the running surface. Resting on this, the roller carriers – essential to the visual effect – quietly guide the sliding panel to the required position, rolling unhindered to a safe stop every time.

Erlaubt ist, was gefällt Designed to please

Alle sichtbaren Metallteile bei RSP 80 sind aus Aluminium gefertigt und sorgen in ihrer seidenmatten Oberfläche für eine anmutige Optik. Neben EV 1 deco als Standard sind auf Anfrage auch zahlreiche Sonder-Eloxaltöne realisierbar. Mit diesem Farbspektrum lässt sich RSP 80 immer passend in Szene setzen.

All the visible metal components of the RSP 80 are manufactured in aluminium and feature an attractive satinised finish. Aside from the 'EV1 deco' standard, numerous special anodised shades can also be provided on request. With this wide colour spectrum, the RSP 80 will always blend perfectly with its surrounds.

Ganz einfach im Paket Packaged to perfection

RSP 80 ist für ein Standard-Öffnungsmaß (lichte Breite) von ca. 1000 mm und ein maximales Türgewicht von 80 kg ausgelegt. Das gesamte Beschlagset für eine Glasschiebetür wird im Paket geliefert. RSP 80 ist schnell und einfach zu installieren, dabei komfortabel und schick in der Anwendung.

The RSP 80 is designed for a standard opening (clear width) of approx. 1000 mm and a maximum door weight of 80 kg. A complete set of hardware and fittings for one sliding glass door is supplied in the package. The RSP 80 system is easy and quick to install, simple to use and utterly alluring in appearance.
