

Endurabase™

Level-Entry Shower Base & Wet Floor System

A smarter way to deliver wet areas without compromising acoustic floor performance.

Endurabase™ is a versatile level-entry shower solution designed to integrate with SoundDown™ acoustic flooring systems. It offers a cost-effective option for both new builds and renovations. It works seamlessly with SoundDown™ acoustic flooring systems, allowing continued acoustic performance across the floor while achieving clean, seamless transitions into tiled showers and wet areas.

Rather than treating wet areas as an interruption to the acoustic floor, SoundDown™ Endurabase™ is designed specifically to integrate wet areas into the wider flooring system. The custom-built Endurabase™ shower base fully integrates into the SoundDown™ flooring systems, meaning acoustic performance can be considered across the floor plate, while providing a purpose-designed base for areas requiring waterproofing.

Endurabase™ can be customised in length, width and height to suit the specific floor build-up. It allows level-entry from living to wet areas, keeping finished floors seamless and supporting project-specific detailing.

It is also compatible with heated flooring systems, giving designers greater flexibility where bathrooms or other tiled areas require underfloor heating.

Endurabase™

Why Endurabase™?

SEAMLESS LEVEL-ENTRY TRANSITIONS

Endurabase™ is designed to help create flush, modern shower entries without awkward step-downs or bulky build-ups. It provides a practical substrate for achieving clean transitions between the main floor and wet area finish.

ACOUSTIC PERFORMANCE ACROSS THE FLOOR

When used as part of a SoundDown™ acoustic flooring system, Endurabase™ helps maintain a consistent floor build-up through wet areas. This supports better project outcomes where acoustic performance is required across apartments, multi-unit homes, hotels or other shared spaces.

FINISH FLEXIBILITY

Endurabase™ can sit underneath the floor finish of choice, allowing designers to specify the look they want while still working within a coordinated wet floor system.

HEATED FLOORING COMPATIBLE

Endurabase™ can be used with heated flooring systems, making it suitable for premium bathrooms and wet areas where comfort, performance and clean detailing all matter.

VERSATILE BY DESIGN

Every project is different. Endurabase™ can be adapted to suit different wet area layouts, shower sizes and design requirements, helping reduce tricky on-site detailing.

Applications

- Apartments and multi-residential projects
- Aged care and retirement living
- High-end residential bathrooms
- Hotels and accommodation
- Townhouses and terrace housing
- Wet rooms, laundries and accessible showers
