Soprasolar Solar Panel Pedestals

EQUUS SOPREMA SOPRASOLAR Pedestals provide a secure, non-penetrating support system for photovoltaic panels on flat and low-slope membrane roofs. Designed to maintain waterproofing integrity, the system enables solar installations without compromising roof performance or durability.

Each pedestal is supplied pre-fitted with membrane and is heat-welded directly to the completed roof surface, eliminating the need for mechanical fixings, studs or membrane penetrations. This preserves the continuity of the waterproofing layer while simplifying installation.

Compatible with both bitumen and TPO membrane systems, SOPRASOLAR is wind-tested to project-specific conditions for reliable long-term performance. When incorporated into an Equus SOPREMA Waterproofing System, the pedestals are supported by a 20-year system warranty.

Key Product Benefits:

- Installed without puncturing the waterproofing membrane
- Heat-welded directly to bitumen or TPO membranes
- Suitable for roof slopes up to 10%
- Wind-tested up to 200km/h
- Height adjustable pedestals
- Fast installation and low maintenance
- Project-specific wind uplift calculations
- 20-year system warranty available with Equus SOPREMA systems

Technical Support:

- Project-specific specifications & details
- Approved installation nationwide & onsite QA
- System warranties
