

KEY FEATURES

1. HIGHLY CONDUCTIVE

Built on a solid stone base, Heatwood maximises warmth in your living space. Its ultralow 0.066 R-value makes it 160% more thermally conductive than conventional 15mm engineered flooring—so your home heats up faster and stays cozy.

2. DURABILITY TESTED

It goes through rigorous and holistic testing. The product has excellent wearing. Is remarkably resistant to wear with having determined that the product is up to 10 times more durable than other leading flooring systems.

3. ENVIRONMENTALLY SOURCED

Environmentally sourced hardwood with over 75% coming from renewable resources.

4. ACOUSTICALLY INSULATED

The unique High Density board composition reduces the impact of any ambient sound / noise underfoot. With the tongue and groove profile being glued to the sub-floor this generates a number of acoustic qualities providing improved sound insulation.

5. TEMPERATURE TOLERANT

The composite base allows it to be used in both hot and cold climates, as well as areas that have a tolerance to heat. The composite base has similar thermal conductivity to conventional concrete. **Maximum heat tolerance is 66°C!**

6. EASY TO INSTALL

Heatwood is very easy to install just like any other engineered floor. The boards can be cut with a standard drop saw blade and laid onto an adhesive glue. The boards are pre-finished with a diamond coating so no sanding or oiling is required once installed.

7. GLOBAL INNOVATION

Designed with global conditions in mind, our flooring has been tested in extreme conditions from the Arid-zone with up to humidity of tropical North Australia.

Heatwood

Stone Based Engineered Flooring

- HIGHLY CONDUCTIVE
- ACOUSTICALLY INSULATED
- DURABILITY TESTED
- TEMPERATURE TOLERANT
- A GLOBAL INNOVATION

INTELLIGENT BY DESIGN AND CLEVER TO THE CORE.

DESIGNED TO BE BOTH HIGHLY FUNCTIONAL
AND AESTHETICALLY SUPERIOR FOR LONGER

Manufactured from more
environmentally aware disciplines,
Heatwood flooring celebrates the beauty
of wood, while achieving a unique balance
between natural appearance and
superior functionality in a
wider range of environments.

2 SOLID TIMBER TOP LAYER
2MM OF PREMIUM WOOD.
AVAILABLE IN VARIOUS
COLOUR FINISHES.

3 PATENTED TECHNOLOGY
UNIQUE PATENTED CORE MADE FROM
A COMPOSITE OF RECYCLED WOOD
PULP AND STONE.

1 FINISHING
SUPER HARD WEARING
AND SCRATCH RESISTANT.
11 COATS OF UV DIAMOND
TECHNOLOGY FINISH.

4 PROFILE
4 SIDED TONGUE &
GROOVE PROFILE
OFFERING FLEXIBILITY
WITH PATTERNS
AND STYLES.

5 SOUND REDUCTION
INBUILT ACOUSTIC AND MOISTURE
BARRIER WITHIN THE ONE-STEP
ADHESIVE APPLICATION.

SUSTAINABLE BY DESIGN
Designed for performance.
Respectful of the planet.
