

Sliding window sill and panel rail.

Key Features

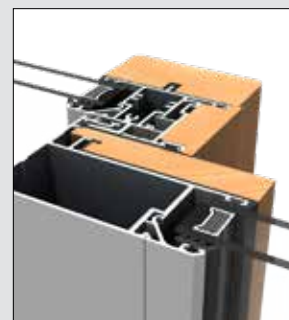

- The Smartwood sliding window system uses the sliding door frame with smaller panel rails
- Bi-parting sliding windows offer wide opening
- Stacking configurations are available using the sliding door profiles
- Exterior sliding system.

Slider with sightline adaptor at back.

Bi-parting slider meeting stiles.

Sliding window interlocker mullion.

The sliding window roller is rated to 150kg so windows of 300kg can be carried.

Specifications

Dimensions

Sliding panels can be made to 1800mm high x 1200mm wide. Panel weight maximum 300kg

Maximum Glass Thickness

32mm IGU

Thermal Values

U-value 5.354 R-value 0.187

Performance

Tested to Very High wind zone

Design Considerations

- Smartwood products need sealing after installation with an appropriate finish e.g. oiled, varnished, stained or painted – regular care and restoration recommended
- Sliding windows are good for applications where wide opening, non-projecting windows are wanted
- A good option for servery windows
- Consider the ease of reaching to the window catch if the sliding panel is placed beyond a bench
- Work well with insect screens.
