

dbBatten™

Acoustic Battens

Product overview

dbBatten™ range is a modular acoustic batten designed for function with modern aesthetic. It is suitable to be installed direct to both ceiling and wall via our patent-pending, glue-free and DIY Ready-Clip™ install system.

Made from 100% polyester fibre, of up to 60% recycled content, dbBattens are light weight and non-irritant, can be direct fixed or rafted and suspended for exceptional sound absorption. As well as being simple to install, dbBatten can be removed and re-purposed with minimal fuss, reducing waste and improving the sustainability of interior finishes.

Available in two standard lengths, or we can custom size to suit your space and design. We can print texture, wood-grain, custom block colour or pattern directly to the batten.

dbBatten™ with Ready-Clip™ is your smart acoustic solution.

Benefits

Precise installation

Our dbBatten™ acoustic battens come with everything needed for installation, including installation guide for easy alignment of battens and fixing locations

Better spaces

Improved acoustics: Audibly reduces reverberation time

Visual impact: A variety of available material colours offering ~78% light reflectance. Panels can be subtle or a feature design. Ask us about customisation

Future proofing

Durable panel construction with high impact resistance provides long-term stability and performance
