

These high quality Juralco rollershutters and rollergrilles have been designed to give you many years of dependable security for your home or business.

## **MAINTENANCE:**

Rollergrilles and rollershutters are designed to be virtually maintenance free, but this is influenced by their installation setting and environmental effects. Regularly check the mechanical parts of rollershutters or rollergrilles and wires on any electrically driven units for visible damage. Internally installed rollergrilles or rollershutters should be maintained six monthly and external installations every three months. Discontinue use if there is any visible damage and fix the issue immediately.

**ALUMINIUM PARTS:** Rollershutters & Rollergrilles should be regularly cleaned to maintain their working order. In general, anodised or powder coated aluminium located in urban areas, should be cleaned every three months and every six months in rural areas. In industrial and marine environments (within 1km of the sea), monthly cold water washing as well as six monthly washes, with warm water & detergent, is necessary.

## **CLEANING:**

Over time rollergrilles and shutters can get dirty, this does not reduce their usability but can impact on their appearance.

- 1 - Carefully clean any powder coated parts with a soft lint free cloth.
- 2 - Use a soft brush (non abrasive) and a mild household detergent solution to remove any stubborn marks.
- 3 - Rinse off with clean fresh water.
- 4 - A quick wipe over with an absorbent cloth chamois will prevent water marks from forming
- 5 - Lubricate moving parts with an aerosol based lubricant such as Dry Glide or similar.

DO clean debris from the guide rails regularly

DO NOT use any solvents, alcohol or scouring agents on any powder coated parts.

DO NOT use any high pressure cleaners on any rollergrille or shutters.
