

Juralco Aluminium Building Products Ltd designs and distributes specialist aluminium joinery systems through a national network of franchised fabricators and agents.

For more than 25 years we have been at the forefront of specialist aluminium door and window products suitable for New Zealand joinery and building methods. Our comprehensive product range includes security and insect screens, balustrades and gates, shutters and awnings, shower screens, wardrobe doors and organisers and internal doors.

The Juralco Felicia Awning is a compact, ready-to-install, cantilevered folding twin arm awning system designed for outside use where protection is needed from sun or light rain. All the components are made of aluminium alloy, ABS plastic or stainless steel, forming a highly-resistant, lightweight, rust-proof construction.

General Description

- The Juralco Felicia Awning system is available as a single unit up to 5.9mt wide, with a max 3.5mt awning extension.
- Typical applications include Decks, Bars, Shops, Terraces, or anywhere needing protection from the sun, or light rain.
- The awning is supplied <u>pre assembled</u>, all necessary brackets, awning roll and two arm units.
- Box Supplied as a single, enclosed unit complete with mounting brackets. Attachment by end brackets, either wall or ceiling mount.
- Awning fabric Many styles available, all mildew and UV resistant. A valance to match can be fitted if required.
- Drive Manual A gearbox fitted to the end of the roller tube assists the operator to raise/lower the curtain.
- Drive Motorised An inline tubular motor retracts the awning automatically.
- The motor is wired to a 3 position switch in-off-out. Remote wireless controls available. Optional wind sensor.
- Arms Factory set spring loaded arms evenly tension the fabric cover, and absorb movement in windy conditions.
- Slope Awning angle adjustable. For Wall mount 0 to 38 degrees down and for Ceiling mount 0 to 58 degrees down.
- Finish All Aluminium, powder coated colour of your choice. Arms powder coat Silver only.

- Wind - As for all Awnings, care must be taken when installing in Wind prone areas. A Volo wind sensor is strongly recommended.

Important information - Powder Coating systems.

<u>Powdercoat Systems</u> The new standard Dulux powder coating system used by Juralco is Duralloy Plus[®]. Also Duralloy[®] and Duratec[®]. Juralco Powder coated prices are for Duralloy Plus[®] and Duralloy[®] (same pricing). Duratec[®] prices on application. The following specs apply to Building Exteriors.

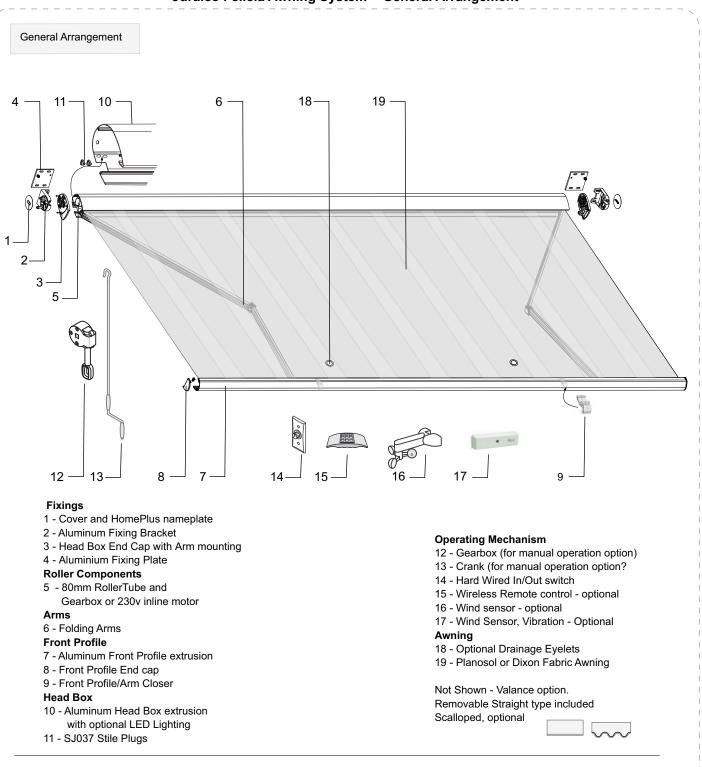

- Dulux Duralloy Plus[®] powder coating systems are suitable for properties greater than 10m from high tide level.
- Residential and Light commercial buildings, 3 levels max. Warranty 15 yrs
- Dulux Duratec[®] powder coating systems are suitable for properties greater than 10m from high tide level All Residential and Commercial buildings. Warranty 25 yrs.

Attachment to structures A PVC Tape or similar material spacer must be used to separate powder coated aluminium items from all concrete and steel structures. Failure to do so can lead to the chemicals in the structure affecting the powder coating, leading to corrosion.

Swimming Pools The chlorinated water in swimming pools can cause the deterioration of powder coated surfaces, leading to corrosion of the underlying surface. It is recommended that Powder coated surfaces be 1200mm min from a pool.

<u>Care</u> The Dulux powder coating warranty period is conditional upon the surface being maintained in accordance with the Dulux 'Care and Maintenance Instructions'. Download from Dulux or refer to the back page of this manual.

Planosol Awning Fabric

Planosol is manufactured from 100% acrylic fibre and will retain a light fastness rating of 6-8 on a 1-8 scale. Planosol is very tightly woven, with minimal light transmission, resulting in excellent UV protection. It has Ultraviolet Protection factor of 50+, maximum value granted for percentage of protection against UV ray and SPF 100. Planosol fabric will remain rot resistant for 5 years under normal exposure conditions.

Dicksons Awning & Outdoor Canvas

The outdoor fabric of choice when it comes to solar protection, offering long- term protection against UV rays, heat, glare and inclement weather. Its solution-dyed Sunacryl acrylic fibres and special Cleangard treatment give it exceptional long-term colour fastness and superior resistance to tearing, water damage and dirt.

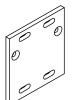

Sunacryl, 100% solution-dyed acrylic: the colour is locked right into the very core of the fibres during manufacture (in contrast to the traditional yarn-dying process whereby colours are applied to the finished yarn and remain on the surface). Dyed all the way through, this type of yarn ensures exceptionally long-lasting, ultra vivid colours.

Note: It is recommended that eyelets are fitted to the front edge of the fabric, to promote draining.

Juralco Felicia Awning System - General Components

General Components

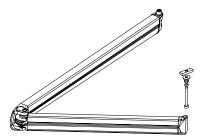

FIXING BRACKET in heavy wall cast aluminium Powder coated in a colour of your choice Used in pairs and fixed directly onto the facings at both ends of the awning. They house the spindles for the casing and can be used for either wall or ceiling mounting. Cover Plate with HomePlus Logo

FIXING Plate in heavy wall cast aluminium Powder coated in a colour of your choice For extra support at Walls or Ceilings, and for large Awnings

HEAD BOX, extruded aluminium Powder coated in a colour of your choice Gives effective protection for the canvas, operating mechanism and arms, which are hidden from view when retracted. Optional LED light bar.

HEAD BOX END CAP, heavy wall cast aluminium Powder coated in a colour of your choice This end cap is the most important part of the awning. It is the component to which the rolling tube, casing and operating mechanism are all mounted, as well as being the attachment point for the arm.

FRONT PROFILE, extruded aluminium Powder coated in a colour of your choice Sealed at both ends by polyamide end caps, it's specially designed shape allows the casing to close completely when the arms are retracted.

ARMS

Powder Silver only The arms consist of extruded aluminium sections, cast aluminium hinge joints and extension springs which are connected internally by sheathed cables. They are capable of supporting extensions of 1500, 2000, 2500, 3000 and 3500mm, and are produced in two sizes, according to the size the extension and width of the awning. They attach directly to the end caps of the casing at either end of the awning and require no adjustment.

ARMS/CLOSING

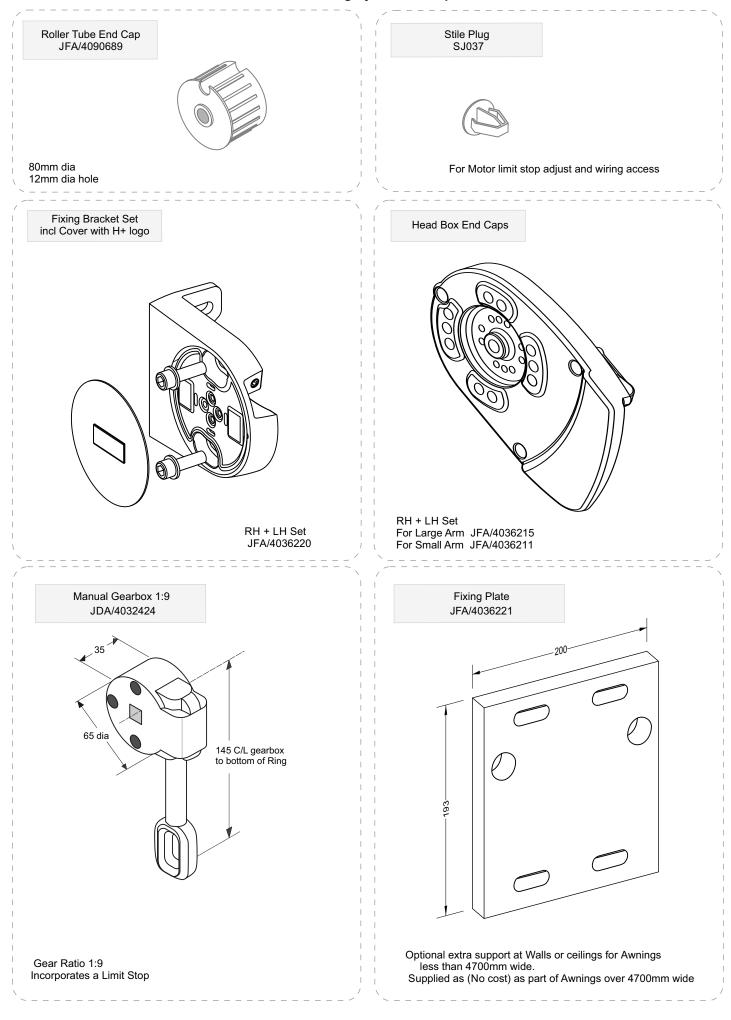

This part is clipped into the Front Profile and allows the Headbox/Front Profile to be completely closed off when the arms are folded

Juralco Felicia Awning System - In Line Motors and Controls

Wind Speed Adjustment - Awning Retraction settings

At the factory, the intervention threshold to is set at level 3 and to change it you must take the following steps

01. Keep the **n** key pressed and wait for the motor to perform 2 movements. Upon completion, release the key.

02. Keep the t key pressed and wait for the motor to perform 3 movements. Upon completion, release the key.

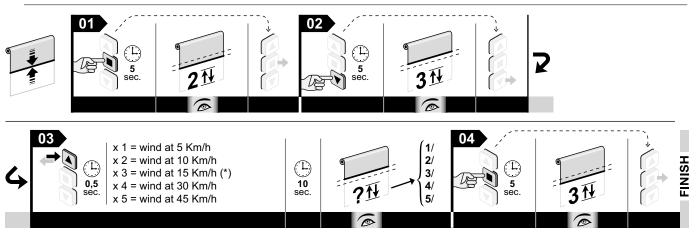

03. Briefly press the **s** key a few times, depending on the level you want to set for wind threshold.

1 press = wind, 5 km/h 2 presses = wind, 10 km/h 3 presses = wind, 15 km/h (factory settings)* 4 presses = wind, 30 km/h 5 presses = wind, 45 km/h

After about 10 seconds, the motor performs the number of movements indicated by the level number selected Note – If this does not occur, cancel the procedure.

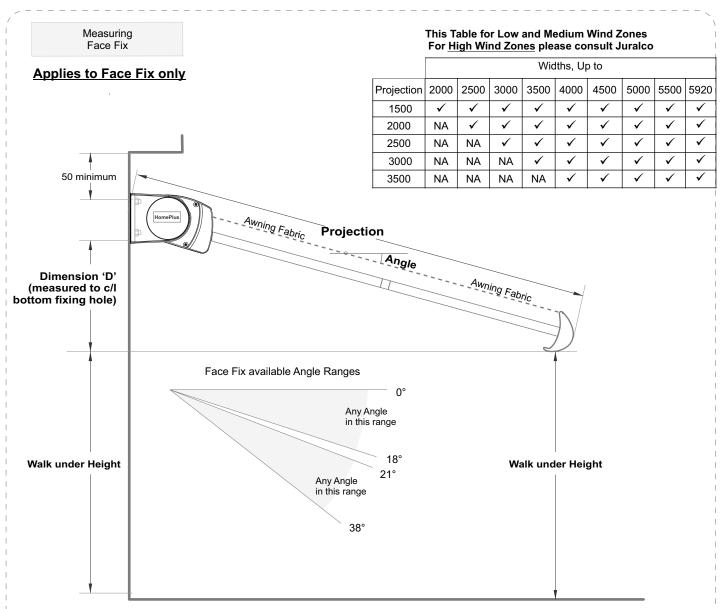

This way, the adjustment is completed without changing the factory setting.

04. Keep the **n** key pressed and wait for the motor to perform 3 movements. Upon completion, release the key.

Notes.

- When performing the procedure, you can cancel it at any time by keeping the **n** and **t** keys pressed simultaneously for 4 seconds.
- Otherwise, do not press any key and wait 60 seconds for the motor to perform 6 movements.
- If you use a sensor equipped with a "trimmer", you must read the sensor instructions and adjust the threshold directly on the sensor.

Tables giving a nominal 'D', from Projection at various angles

Juralco Felicia Awning System - Building Consents

These two pages are an extract from the Department of Building and Housing

- Building Work that does not require a Building consent pages 21 to 24. Online at www.dbh.govt.nz/bc-no-consent
- These are new exemptions dated Dec 2010

While every effort has been made to ensure that this information is correct at time of writing, it is provided for guidance only and Juralco will accept no liability for, nor warrants the accuracy of this guidance. It is the sole responsibility of the of the purchaser to confirm current status of consent requirements with the relevant territorial authority before purchase and installation.

Awnings

Awnings.

Exemption (ja) of Schedule 1

A building consent is not required for the following building work:

- (ja) the construction, alteration, or removal of any fabric, glass, or metal awning on any building that-
 - (i) is on the ground or first storey level; and
 - (ii) does not exceed 20 square metres in size.

Guidance:

Awnings are usually coverings that are fabric, glass or metal. They are normally attached to the exterior of a building and are commonly used for protection from sun, rain or as a wind buffer (eg, a shadesail or window awning). The installation of awnings that are 20 square metres or less on any building at a ground floor or first floor level will comply with this exemption.

Size is a factor for large awnings, as they can damage the walls they are attached to or adjacent property or potentially injure people in high winds. Accordingly, any awnings larger than 20 square metres require a building consent.

This exemption relates to awnings which are currently attached or are to be attached to a building's external envelope or exterior surfaces. Awnings may be removed, altered and constructed, providing this work complies with the Building Code. Particular emphasis should be placed on weather tightness detailing when removing, altering and constructing such structures. All mechanical connections (eg, nuts, bolts, coach screws etc) which penetrate the building envelope and provide support to awnings must provide adequate resistance to moisture getting into the structure. Please note, this exemption does not relieve the owner of any other requirements under the Resource Management Act 1991 and or local district plan rules and provisions.

Examples where this exemption could apply:

A shadesail is to be attached above a deck at first floor level of a dwelling. The proposed shadesail has a total area of 18 square metres, and meets all Building Code requirements.

The removal of an existing 12 square metres awning providing shade at the entry to a building (situated at first floor level).

Examples where building consent is required:

A glass awning is to be fitted to an apartment on the sixth floor of the building. Though the awning has a total coverage of 14 square metres, it is not exempt because of its height above ground and a building consent is required.

Territorial Authority discretionary exemptions

Territorial authority discretionary exemptions

Exemption (k) of Schedule 1

A building consent is not required for the following building work:

- (k) any other building work in respect of which the territorial authority (or, as the case requires, the regional authority) considers that a building consent is not necessary for the purposes of this Act because that building work-
 - (i) is unlikely to be carried out otherwise than in accordance with the building code; or
 - (ii) if carried out otherwise than in accordance with the building code, is unlikely to endanger people or any building, whether on the same land or on other property.

Guidance:

Exemption (k) allows a discretionary decision to made by a territorial authority (city or district council) or regional authority (regional council) to exempt proposed building work from the requirement to obtain a building consent in the circumstances specified in (i) and (ii), above.

Members of the public may ask their local council to consider their proposed building work under this exemption. However, the decision to allow any exemption under this part of Schedule 1 is totally at the council's discretion, based on the risk of building work not complying with the Building Code or endangering people or property.

Local councils should have procedures for making formal decisions under exemption (k) to exempt building work, that meet the specific criteria of (i) and (ii) above, from the requirement to obtain a building consent.

In all cases, the Department recommends that the decision, reason for the decision and the outcome of the decision be recorded by the local council and placed on the property file that relates to the building work.

Juralco Felicia Awning System - Powder Coating Care and Maintenance

Powder Coating Installation Care

Warning re use of solvents:

- In some cases strong solvents are recommended for thinning various types of paints and also for cleaning up mastics and sealants.
- These can be harmful to the extended life of the powder coated surface, and must not be used for cleaning purposes.
- It is important to note that the damage will not be visible immediately and may take up to I2 months to develop.

If paint splashes or sealants and mastics need to be removed then the following may be safely used: Methylated Spirits, Ethyl Alcohol, Isopropanol or preferably a mild detergent in warm water.

Joinery Protection during Installation:

All the activity on a construction site means that your powder coated items may get knocked or scratched, splattered with mortar, plaster, textured coating or paint during the later stages of construction.

Please ensure that all powder coated articles are <u>masked or covered</u> at this time. It is far easier to prevent accidents than to try and correct them. Should your joinery receive mortar or paint splashes see that these are removed before cure and follow the instructions contained in this brochure.

> Typical sticker used to warn other trades of the need to protect and mask off powder coated joinery (applies to anodised joinery also)

"IMPORTANT ALL TRADES" This valuable aluminium joinery will suffer permanent damage from: plaster, mortar and paint splashes - Protect if splashes occur - Immediately wash down joinery with water or meths - Do not allow splashes to harden! ~ Do not use solvents! - Do not remove this label until final clean completed.

This photograph display damage that has occurred on site, post installation. The photo of the masked joinery displays clear signs of damage that could have occurred were it not masked. Please ensure that your joinery is protected right through the entire construction process.

Powder Coating Maintenance

External - Maintenance Program:

To extend the life of external powder coated articles and to comply with warranty requirements for powder coated aluminium joinery, a <u>simple, regular</u> maintenance program must be implemented.

The effects of ultra violet light, atmospheric pollution, dirt, grime and airborne salt deposits will all accumulate over time and must be removed or surface staining and weathering will occur, leading to an unsightly appearance.

For external coatings, cleaning should take place every six months. In areas where pollutants are more prevalent, such as beachfront houses and industrial or geothermal areas, then a cleaning program should be carried out on a more frequent basis ie. every one to three months.

Cleaning your powder coating:

Carefully remove any loose surface deposits with a wet sponge.
 Use a soft brush (non abrasive) and a mild household detergent (do not use solvents) in warm water, remove dust, salt and other deposits.
 Rinse off with clean fresh water.

Restoring weathered or scratched surfaces:

Repair of Scuffed or Scratched surfaces Dulux Spray Cans are available in all colour card colours.

Repair of Small Scratches or Chips. Dulux Dabsticks are ideally suited for the repair of small scratches. Dabsticks may not be available in all colour card colours.

Repair of Weathered areas . Dulux Gloss Up is a light to medium cutting cream ideally suited for gloss restoration and has been specifically designed for this purpose. Gloss Up contains no waxes or silicone and is a one step system.
