

LOUVRELITE® SOLAR CONTROL

YEAR ROUND PASSIVE SOLAR CONTROL

Louvres are the perfect design feature to control light in a passive way.

Taking into account seasonal light angles, the LouvreLite Solar Control system can be set to allow maximum light in winter, and minimal in summer, without any ongoing adjustments required.

- + Functional design feature for passive solar control
- + Set to block the hot summer sun, but allow light through in the colder months
- + Custom-made and powder coated to your specifications
